This work has been made possible by the Pritzker Children's Initiative, funder of the National Collaborative for Infants and Toddlers. Through their generous support, this toolkit was compiled by First 5 Orange County's Pritzker Fellow, Hoda Shawky, MSN, PCNP, PHN, PMHS, IBCLC, in collaboration with members of the Orange County Perinatal Mood and Anxiety Disorder Collaborative Steering Committee.

Nearly one in five women living in Orange County are affected by a form of depression or anxiety either during pregnancy, up to 12 months after birth, or both. Nationally, one in ten men are impacted as well. Referred to as Perinatal Mood and Anxiety Disorders (PMADs), the rate of these conditions increases among mothers experiencing multiple stressors, such as racism, poverty, and adverse childhood events during their own childhood. Left untreated, depression in mothers and other caregivers can put a strain on relationships at home, in addition to negatively impacting all aspects of the young child’s development.

Recognizing the long-term impact of perinatal mood and anxiety disorders on families and children, and after the 2018 passage of a Maternal Mental Health Bill Package in California, the need for local systems building around perinatal mental health became evident.

While several programs to treat PMADs already existed in Orange County, access to those services was limited due to a lack of knowledge on the topic and of the resources available. Building on the substantive work by the Orange County Health Care Agency (OCHCA) and the Orange County Perinatal Council, community partners, First 5 Orange County, OCHCA, the Orange County Medical Association, CalOptima, Hoag and St. Joseph Hospitals, MOMs Orange County, Children and Family Futures, the Hospital Association of Southern California, and the Regional Perinatal Network, formed the Orange County Perinatal Mood and Anxiety Disorders Collaborative in 2019.

The Orange County Perinatal Mental Health Toolkit was developed by the OC PMAD Collaborative in order to build the foundation for a perinatal mental health system of support. The toolkit contains local resources, evidence-based tools, and recommendations to assist healthcare and service providers in offering education, preventive interventions, screening, referral, and treatment for new and expecting parents. Updates to this toolkit will be made yearly. Questions and feedback directed to First5OC@cfcoc.ocgov.com are welcome.

For specific inquiries regarding mental health services and treatment programs for non-perinatal adults and children, contact 1-855-OC-LINKS (1-855-625-4657).
In accordance with best practice recommendations by the American College of Obstetricians and Gynecologists, the American Academy of Pediatrics, Bright Futures, as well as in compliance with California Assembly Bill 2193 requiring prenatal and postpartum mental health screenings, this toolkit seeks to equip health care and other providers with tools for identifying and connecting families to resources that address their emotional and mental well-being.

It is recommended that all perinatal clients receive an evidence-based screening during their primary care visit, whether in the obstetric, family practice, or pediatric setting. Recommendations include but are not limited to:

• Obstetric visit: At minimum once prenatally and once postpartum
• Pediatric visit: At minimum during the first, second, fourth, and sixth month well child visits.
• Whenever index for suspicion is high
Key Risk Factors

Regardless of ethnicity, level of education, socio-economic status, or other factors, perinatal mood and anxiety disorders can affect any parent. Furthermore, additional factors known to increase the risk for perinatal mood and anxiety disorders include:

- Personal or family history of depression
- History of physical or sexual abuse, intimate partner violence
- Unplanned or unwanted pregnancy
- Stressful life events
- Pregestational or gestational diabetes
- Complications during pregnancy (e.g. preterm delivery or pregnancy loss)
- Low socioeconomic status
- Lack of social or financial support
- Adolescent parenthood

_The imminent short and long term impacts of the current COVID-19 pandemic on the emotional and mental well-being of parents and their children are proof points for the importance of screening for risk and signs of distress in order to mitigate additional family hardships._

For that reason, the Perinatal Mental Health Toolkit begins first with preventive interventions and ends with educational resources to underscore the importance and effectiveness of education and prevention to reduce the risk of perinatal anxiety and depression on mothers, fathers, or other caregivers and their infants.
Preventive Interventions to Integrate Into Practice

Based on strong evidence to support the effectiveness of counseling in reducing the risk of postpartum depression, a 2019 U.S. Preventive Services Task Force publication recommended implementation of preventive interventions for women at risk of developing perinatal depression, such as those with a history of depression, current depressive symptoms, or certain socioeconomic risk factors (e.g., low income or young or single parenthood). See the page above for a more complete list of risk factors.

Below are two evidence-based programs proven to reduce the risk of perinatal depression by up to 50% among at risk clients.

Mothers and Babies Program

This 6-12 week individual or group-based program uses psychoeducation, attachment theory, and cognitive behavioral therapy approaches to provide new mothers with tools to help reduce the onset of depressive symptoms. Designed to be delivered prenatally, this curriculum empowers mothers to by encouraging them to engage in enjoyable activities, build their social support network, and develop healthier ways of thinking. It can be offered in clinic or community based settings (such as home visiting programs, WIC, or community centers) by either paraprofessionals or professionals with mental health training. Training information and curriculum are available online at https://www.mothersandbabiesprogram.org/.

ROSE (Reach Out, Stay Strong, Essentials for mothers of newborns)

This preventive intervention consists of four to five individual or group sessions using an interpersonal therapy approach to provide psycho-education, stress management, role transitions, and interpersonal conflicts. Intended to prevent postpartum depression among low-income women, the ROSE program may be offered by paraprofessionals or mental health professionals in either clinic or community based settings. Information on free training and technical assistance as part of the ROSE Sustainment Study, visit https://www.publichealth.msu.edu/flint-research/the-rose-sustainment-study.
Counseling to Prevent Perinatal Depression is Now Reimbursable

Effective for dates of service on or after February 12, 2019, and consistent with the U.S. Preventive Services Task Force recommendation, Medi-Cal will now reimburse individual and/or group counseling sessions for pregnant or postpartum women with certain depressive, socioeconomic and mental health related risk factors. These risk factors include perinatal depression, a history of depression, current depressive symptoms (that do not reach a diagnostic threshold), low income, adolescent or single parenthood, recent intimate partner violence, elevated anxiety symptoms and a history of significant negative life events.

Up to a combined total of 20 individual counseling (CPT codes 90832 and 90837) and/or group counseling (CPT code 90853) sessions are reimbursable when delivered during the prenatal period and/or during the 12 months following childbirth. Modifier 33 must be submitted on claims for counseling given to prevent perinatal depression.
While many providers may rely on conversations with expecting or new parents to detect perinatal depression or anxiety, studies have shown that cases can be missed without the use of a standardized screening tool. Furthermore, routine practice of asking standardized questions will help normalize discussion about mental health and can eliminate the stigma associated with this issue.
Mental Health Screening Tools

Below are some commonly used, evidence-based tools to screen for depression, anxiety, or both, some of which may already be included in your practice’s electronic medical record (EMR). Otherwise, patients may be able to complete surveys on a printed form or tablet, after which the score can be entered into the chart. Some practices may choose to screen all patients with an initial Patient Health Questionnaire (PHQ)-2 or PHQ-4 as part of routine intake and follow up a positive score with the PHQ-9 or Edinburgh.

For Edinburgh and PH-Q 9 surveys in additional languages, go to https://www.ochealthinfo.com/phs/about/family/mcah/pmad

(For office coding: Total Score $T = ____ + ____ + ____ )

Developed by Drs. Robert L. Spitzer, Janet B.W. Williams, Kurt Kroenke and colleagues, with an educational grant from Pfizer Inc. No permission required to reproduce, translate, display or distribute.
Since you are either pregnant or have recently had a baby, we want to know how you feel. Please mark “X” on the box by the answer that comes closest to how you have felt IN THE PAST 7 DAYS—not just how you feel today. Complete all 10 items and find your score by adding each number that appears to the left of your checked answer. This is a screening test; not a medical diagnosis. If something doesn’t seem right, talk to your health care provider regardless of your score.

Below is an example, already completed.

In the past 7 days:

1. I have been able to laugh and see the funny side of things:
   0  ☐  As much as I always could
   1  ☑  Not quite so much now
   2  ☐  Definitely not so much now
   3  ☐  Not at all

2. I have looked forward with enjoyment to things
   0  ☐  As much as I ever did
   1  ☒  Rather less than I used to
   2  ☐  Definitely less than I used to
   3  ☐  Hardly at all

3. I have blamed myself unnecessarily when things went wrong
   3  ☐  Yes, most of the time
   2  ☐  Yes, some of the time
   1  ☐  Not very often
   0  ☐  No, never

4. I have been anxious or worried for no good reason
   0  ☐  No, not at all
   1  ☒  Hardly ever
   2  ☐  Yes, sometimes
   4  ☒  Yes, very often

5. I have felt scared or panicky for no very good reason
   3  ☐  Yes, quite a lot
   2  ☐  Yes, sometimes
   1  ☐  No, not much
   0  ☐  No, not at all

6. Things have been getting on top of me
   3  ☐  Yes, most of the time I haven’t been able to cope
   2  ☐  Yes, sometimes I haven’t been coping as well as usual
   1  ☐  No, most of the time I have coped quite well
   0  ☐  No, I have been coping as well as ever

7. I have been so unhappy that I have had difficulty sleeping
   3  ☐  Yes, most of the time
   2  ☐  Yes, sometimes
   1  ☐  No, not very often
   0  ☐  No, not at all

8. I have felt sad or miserable
   3  ☐  Yes, most of the time
   2  ☐  Yes, quite often
   1  ☐  Not very often
   0  ☐  No, not at all

9. I have been so unhappy that I have been crying
   3  ☐  Yes, most of the time
   2  ☐  Yes, quite often
   1  ☒  Only occasionally
   0  ☐  No, never

10. The thought of harming myself has occurred to me
   3  ☐  Yes, quite often
   2  ☐  Sometimes
   1  ☒  Hardly ever
   0  ☐  Never

Total Score: [ ]
The EPDS was developed for screening postpartum women in outpatient, home visiting settings, or at the 6–8 week postpartum examination. It has been utilized among numerous populations including U.S. women and Spanish speaking women in other countries. The EPDS consists of 10 questions. The test can usually be completed in less than 5 minutes. Responses are scored 0, 1, 2, or 3 according to increased severity of the symptom. Items marked with an asterisk (*) are reverse scored (i.e., 3, 2, 1, and 0). The total score is determined by adding together the scores for each of the 10 items.

Validation studies have utilized various threshold scores in determining which women were positive and in need of referral. Cut-off scores ranged from 9 to 13 points. Therefore, to err on safety’s side, a woman scoring 9 or more points or indicating any suicidal ideation – that is she scores 1 or higher on question #10 – should be referred immediately for follow-up. Even if a woman scores less than 9, if the clinician feels the client is suffering from depression, an appropriate referral should be made. The EPDS is only a screening tool. It does not diagnose depression – that is done by appropriately licensed health care personnel. Users may reproduce the scale without permission providing the copyright is respected by quoting the names of the authors, title and the source of the paper in all reproduced copies.

Instructions for Users
1. The mother is asked to underline 1 of 4 possible responses that comes the closest to how she has been feeling the previous 7 days.
2. All 10 items must be completed.
3. Care should be taken to avoid the possibility of the mother discussing her answers with others.
4. The mother should complete the scale herself, unless she has limited English or has difficulty with reading.
PATIENT HEALTH QUESTIONNAIRE-9 (PHQ-9)

Over the last 2 weeks, how often have you been bothered by any of the following problems? (Use “✔” to indicate your answer)

<table>

Substance Use Screening and Resources

Pregnancy is an opportune time to screen and connect women to resources because of an increased motivation to change habits for the future well-being of their child. Estimates of perinatal psychiatric and substance use co-morbidity range from 57 to 91%, with the most common diagnoses being depression, anxiety, and post-traumatic stress disorder. For this reason it is crucial to screen, at minimum, those with positive perinatal mood and anxiety disorder scores for substance use risk. Referral and follow up are warranted for any positive scores on any of the screens below.

It is important to encourage a woman who may be reluctant to admit to substance use or to accept help. Reassure her that by enrolling in supportive services earlier, she increases the likelihood of delivering a healthy baby that can remain safely in the home.

Recovery Referral Sources

- **Beneficiary Access Line at (800) 723-8641**, available 24/7 for Medi-Cal eligible clients
- **(855) OC-LINKS or (855) 625-4657** Behavioral Health Navigators available from 8 am – 6 pm to link clients with recovery services.
- **Perinatal Substance Abuse Services Assessment and Coordination Team (PSAS/ACT)** home visiting program which increases access and adherence to treatment **(714) 834-7747**.

For more resources on substance and opiate use, visit NAStoolkit.org for the **Mother & Baby Substance Exposure Toolkit**.

NIDA Quick Screen V1.0

Name: ................................................................. Sex ( ) F ( ) M Age...........

Interviewer............................................... Date ........../........../......

Introduction (Please read to patient)

Hi, I’m __________, nice to meet you. If it’s okay with you, I’d like to ask you a few questions that will help me give you better medical care. The questions relate to your experience with alcohol, cigarettes, and other drugs. Some of the substances we’ll talk about are prescribed by a doctor (like pain medications). But I will only record those if you have taken them for reasons or in doses other than prescribed. I’ll also ask you about illicit or illegal drug use—but only to better diagnose and treat you.

Instructions: For each substance, mark in the appropriate column. For example, if the patient has used cocaine monthly in the past year, put a mark in the “Monthly” column in the “illegal drug” row.

<table>
<thead>

- If the patient says “NO” for all drugs in the Quick Screen, reinforce abstinence. Screening is complete.
- If the patient says “Yes” to one or more days of heavy drinking, patient is an at-risk drinker. Please see NIAAA website “How to Help Patients Who Drink Too Much: A Clinical Approach” [http://pubs.niaaa.nih.gov/publications/Practitioner/CliniciansGuide2005/clinicians_guide.htm](http://pubs.niaaa.nih.gov/publications/Practitioner/CliniciansGuide2005/clinicians_guide.htm), for information to Assess, Advise, Assist, and Arrange help for at risk drinkers or patients with alcohol use disorders
- If patient says “Yes” to use of tobacco: Any current tobacco use places a patient at risk. Advise all tobacco users to quit. For more information on smoking cessation, please see “Helping Smokers Quit: A Guide for Clinicians” [http://www.ahrq.gov/clinic/tobacco/clinhlpsmksqt.htm](http://www.ahrq.gov/clinic/tobacco/clinhlpsmksqt.htm)
- If the patient says “Yes” to use of illegal drugs or prescription drugs for non-medical reasons, proceed to Question 1 of the NIDA-Modified ASSIST.

---

1 This guide is designed to assist clinicians serving adult patients in screening for drug use. The NIDA Quick Screen was adapted from the single-question screen for drug use in primary care by Saiz et al. (available at [http://archinte.ama-assn.org/cgi/reprint/170/13/1155](http://archinte.ama-assn.org/cgi/reprint/170/13/1155)) and the National Institute on Alcohol Abuse and Alcoholism’s screening question on heavy drinking days (available at [http://pubs.niaaa.nih.gov/publications/Practitioner/CliniciansGuide2005/clinicians_guide.htm](http://pubs.niaaa.nih.gov/publications/Practitioner/CliniciansGuide2005/clinicians_guide.htm)). The NIDA-modified ASSIST was adapted from the World Health Organization (WHO) Alcohol, Smoking and Substance Involvement Screening Test (ASSIST), Version 3.0, developed and published by WHO (available at [http://www.who.int/substance_abuse/activities/assist_v3_english.pdf](http://www.who.int/substance_abuse/activities/assist_v3_english.pdf)).
The CRAFFT Interview (version 2.1)

To be orally administered by the clinician

Begin: “I’m going to ask you a few questions that I ask all my patients. Please be honest. I will keep your answers confidential.”

Part A

During the PAST 12 MONTHS, on how many days did you:

1. Drink more than a few sips of beer, wine, or any drink containing alcohol? Say “0” if none.

2. Use any marijuana (cannabis, weed, oil, wax, or hash by smoking, vaping, dabbing, or in edibles) or “synthetic marijuana” (like “K2,” “Spice”)? Say “0” if none.

3. Use anything else to get high (like other illegal drugs, prescription or over-the-counter medications, and things that you sniff, huff, vape, or inject)? Say “0” if none.

Did the patient answer “0” for all questions in Part A?

Yes ☐ No ☐

Ask CAR question only, then stop

Ask all six CRAFFT* questions below

Part B

C Have you ever ridden in a CAR driven by someone (including yourself) who was “high” or had been using alcohol or drugs?

R Do you ever use alcohol or drugs to RELAX, feel better about yourself, or fit in?

A Do you ever use alcohol or drugs while you are by yourself, or ALONE?

F Do you ever FORGET things you did while using alcohol or drugs?

F Do your FAMILY or FRIENDS ever tell you that you should cut down on your drinking or drug use?

T Have you ever gotten into TROUBLE while you were using alcohol or drugs?

*Two or more YES answers suggest a serious problem and need for further assessment. See back for further instructions

NOTICE TO CLINIC STAFF AND MEDICAL RECORDS:
The information on this page is protected by special federal confidentiality rules (42 CFR Part 2), which prohibit disclosure of this information unless authorized by specific written consent.
CRAFFT Score Interpretation

Probability of a DSM-5 Substance Use Disorder by CRAFFT score*

Use the 5 R’s talking points for brief counseling.

1. **REVIEW** screening results
   For each “yes” response: “Can you tell me more about that?”

2. **RECOMMEND** not to use
   “As your doctor (nurse/health care provider), my recommendation is not to use any alcohol, marijuana or other drug because they can: 1) Harm your developing brain; 2) Interfere with learning and memory, and 3) Put you in embarrassing or dangerous situations.”

3. **RIDING/DRIVING** risk counseling
   “Motor vehicle crashes are the leading cause of death for young people. I give all my patients the Contract for Life. Please take it home and discuss it with your parents/guardians to create a plan for safe rides home.”

4. **RESPONSE** elicit self-motivational statements
   Non-users: “If someone asked you why you don’t drink or use drugs, what would you say?” Users: “What would be some of the benefits of not using?”

5. **REINFORCE** self-efficacy
   “I believe you have what it takes to keep alcohol and drugs from getting in the way of achieving your goals.”

Maternal Screening and Care Pathway for Perinatal Mood and Anxiety Disorders

The following algorithm and referral guide will help direct practitioners to local resources available for at risk clients as well as those with scores suggesting mild to severe symptoms. Updated versions can be found at https://www.ochealthinfo.com/civicax/file-bank/blobdownload.aspx?BlobID=47188

Perinatal Mood and Anxiety Disorders: Maternal Screening and Care Pathway

The American College of Obstetricians and Gynecologists recommends that obstetrician–gynecologists and other obstetric care providers screen pregnant patients at least once during the perinatal period for depression and anxiety symptoms using a standardized, validated tool. It is recommended that all obstetrician–gynecologists and other obstetric care providers complete a full assessment of mood and emotional well-being during the comprehensive postpartum visit for each patient. If a patient is screened for depression and anxiety during pregnancy, additional screening should then occur during the comprehensive postpartum visit. This care pathway was designed to assist the clinician and is not intended to replace the clinician’s judgment or establish a protocol for all patients with a particular condition. Diagnosis and treatment should be under the close supervision of a qualified health provider.

Billing and Reimbursement Information

Depression Screenings for Select Recipients Are Now Reimbursable

Effective for dates of service on or after December 1, 2018, depression screening is reimbursable under Medi-Cal as an outpatient service. Screening should be implemented with adequate systems in place to ensure accurate diagnosis, effective treatment options including referral to mental health specialists and appropriate follow-up.

Billing Codes

The following chart lists procedure codes that must be used when billing for depression screening:

<table>
<thead>
<tr>
<th>Recipient Category</th>
<th>Positive Depression Screen</th>
<th>Negative Depression Screen</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age 12 or older, whether or not pregnant or postpartum</td>
<td>G8431</td>
<td>G8510</td>
</tr>
</tbody>
</table>

Pregnant or Postpartum Recipients

Providers of prenatal care and postpartum care may submit claims twice per year per pregnant or postpartum recipient: once when the recipient is pregnant and once when she is postpartum. Screens that are positive for depression must be billed using HCPCS code G8431 (screening for depression is documented as being positive and a follow-up plan is documented). Screens that are negative for depression must be billed using HCPCS code G8510 (screening for depression is documented as negative, a follow-up plan is not required).

Postpartum Depression Screening at Infant Visits

Providers of well-child and episodic care for infants may submit claims for a maternal depression screening up to four times during the infant's first year of life. Bright Futures recommends screening for maternal depression at the infant's one-month, two-month, four-month and six-month visits, with referral to the appropriate provider for further care if indicated. Screens that are positive for depression must be billed using HCPCS code. Screens that are negative for depression must be billed using HCPCS code. When a postpartum depression screening is provided at the infant's medical visit, the screening must be billed using the infant's Medi-Cal ID. The only
exception to this policy is that the mother’s Medi-Cal ID may be used during the first two months of life if the infant’s Medi-Cal eligibility has not yet been established.

Records for maternal depression screenings must be maintained in a separate medical record to document the mother’s screening results and any recommendations/referrals that were given. The American Academy of Pediatrics and the Centers for Medicare & Medicaid Services (CMS) recommend that treatment of postpartum depression include a parenting component.

**Screening Tools**

Medi-Cal requires the use of a validated depression screening tool such as PHQ-9, Edinburgh, or the Beck Depression Inventory.

**Billing Medi-Cal for Telehealth**

Modifier 95 must be used for Medi-Cal covered benefits or services delivered via synchronous telecommunications systems. Only the portion(s) of the telehealth service rendered at the distant site are billed with modifier 95. The use of modifier 95 does not alter reimbursement for the CPT or HCPCS code.

---

**Coding for Perinatal Depression**

**Screening for Depression**

If a physician is providing the global obstetrical service (and reporting a global code), the payer may consider screening for depression as part of the global service and not reimburse additionally for the service. This is particularly true if the physician screens every patient for depression as routine. However, some payers may reimburse for this service. Physicians should check with their specific payers.

**Treatment for Patients with Signs and Symptoms**

If the patient has signs and/or symptoms of depression (reported with an appropriate diagnosis code), then those services are reported separately from the global service and may potentially be reimbursed.

**Diagnosis Coding**

Mental, behavioral and neurodevelopmental disorder codes are found in Chapter 5, Mental, Behavioral, and Neurodevelopmental Disorders, code block, (F01-F99), of ICD-10-CM. Note that many payers will only reimburse a psychiatrist or psychologist for services linked to a diagnosis in the mental disorders chapter.

The possible ICD-10-CM diagnosis codes are as follows:
- F05 - Delirium due to known physiological condition
- F30.-- - Manic episode
- F34.1 - Dysthymic disorder
- F32.9 - Major depressive disorder, single episode, unspecified

Other diagnoses that may be reported may be found in the signs and symptoms and nervous system chapters. Symptoms, Signs and Abnormal Clinical and Laboratory Findings, Not Elsewhere Classified, code block, (R00-R99), are found in Chapter 18 of ICD-10-CM. Sleep disorders are found in Chapter 6, Diseases of the Nervous System, code block, (G00-G99), sub code section, G40-G47: Episodic and paroxysmal disorders.

Additional possible ICD-10-CM codes are as follows:
- G47.9 - Sleep disorder, unspecified
- R53.81 - Other malaise
- R53.83 - Other fatigue
- R45.-- - Symptoms and signs involving emotional state
**Procedure Coding**

The correct Evaluation and Management (E/M) code will depend on whether the encounter was for screening or treatment of depression.

If the encounter was for screening for a patient without symptoms, report a preventive medicine code. These codes are selected according to the time spent in face-to-face counseling with the patient. Whether or not these codes will be reimbursed by the payer will vary. Possible procedure codes are:

- 99401-99404 Preventive medicine, individual counseling
- 99411-99412 Preventive medicine, group counseling

If the encounter was for treatment for a patient with a diagnosis of depression or documented symptoms of depression, report an office or other outpatient E/M code. These codes list a “typical time” in the code descriptions. Time spent face to face counseling the patient must be documented in the medical record. The record must document that either all of the encounter or more than 50% of the total time was spent counseling the patient. Possible procedure codes are:

- 99201-99205 New patient, office or other outpatient visit
- 99211-99215 Established patient, office or other outpatient visit

*Coding for Perinatal Depression (Revised February 6, 2017)*
Useful Numbers

During times of crisis, parents need access to immediate resources. Sharing resources that can help meet their immediate needs can help reduce and prevent the impact of depression or anxiety on themselves and their children.

Immediate Links to Services

Consider sharing 2-1-1 and Help Me Grow with all clients as immediate ways to connect families to essential resources as well as those unique to the needs of the growing baby or other siblings in the home.

2-1-1 For immediate assistance with social determinants of health: domestic violence, food, housing, finances, post-incarceration, veteran services, legal assistance, and more. Call 211 or text their zip code to 898211

Help Me Grow To address the developmental and behavioral needs of children 0-8 years: HelpMeGrowOC.org or 866-476-9025.

OC Links To assist clients with accessing mental health care: 855-OC-LINKS or 855-625-4657.

Warmlines for Emotional Support, Information & Resources

OC Warmline (714) 991-6412
Mondays-Saturdays from 9am-3am, Sundays from 10am-3am.

Postpartum Support International 800-944-4773

National Suicide Prevention Hotline 800-273-TALK (8255)
Providers play a key role in normalizing discussions on mental health. We recommend offering information on perinatal mental health to all clients in the same way that other health practices such as healthy diet and exercise are discussed. Here are a few frequently used resources that can serve both providers and parents.

The end of this document contains printable handouts on perinatal mental health and local resources for new parents and families to keep at hand. Make it part of your practice to normalize discussion about mental health with all caregivers, not just mothers. We encourage you to print and hand out the multi-lingual written materials to all expecting and new parents.

**Educational Links, Self-Help Apps**

For information on perinatal mental health:
- Maternal Mental Health Now
  https://www.maternalmentalhealthnow.org/
- Postpartum Support International
  https://www.postpartum.net/
- Women’s Mental Health
  https://womensmentalhealth.org/

**Self-Help Apps**

- Maternal Mental Health Now’s Emotional Wellness Self-Help Tool is a free web-based app that helps expecting or new mothers and their support systems get informed about perinatal depression and anxiety, and get prepared to successfully manage these conditions if needed.
  https://mycare.mmhnow.org/

- COVID Coach can be used as a stand-alone education and self-care tool, or as a supplement to professional mental health care. You can mark your favorite coping tools and track your mental health over time. Set reminders to visit the app each day and work toward your goals. The app can also help you create your own personal support network.

**Printable Educational Materials in Multiple Languages**

To access the Speak Up When You’re Down brochure in additional languages, visit: https://www.maternalmentalhealthnow.org/training/materials. Note: Only the brochures found below contain information on local programs.
1. MATERNAL DEPRESSION AND ANXIETY IS COMMON.

It is the number one complication of pregnancy. In the US, 15% to 20% of new moms, or about 1 million women, each year experience perinatal mood and anxiety disorders. Some studies suggest that number may be even higher.

YOU ARE NOT ALONE.

Maternal depression can affect any woman regardless of age, income, culture, or education.

2. YOU MIGHT EXPERIENCE SOME OF THESE SYMPTOMS.

- Feelings of sadness or anger.
- Mood swings: highs and lows, feeling overwhelmed.
- Difficulty concentrating.
- Lack of interest in things you used to enjoy.
- Changes in sleeping and eating habits.
- Panic attacks, nervousness, and anxiety.
- Excessive worry about your baby.
- Thoughts of harming yourself or your baby.
- Feelings of grief and inadequacy.
- Difficulty accepting motherhood.
- Irrational thinking; seeing or hearing things that are not there.

Some of the ways women describe their feelings include:

- I want to cry all the time.
- I feel like I’m on an emotional roller coaster.
- I will never feel like myself again.
- I don’t think my baby likes me.
- Everything feels like a huge effort.

3. SYMPTOMS CAN APPEAR ANY TIME DURING PREGNANCY, AND UP TO THE CHILD’S FIRST YEAR.

Baby blues, a normal adjustment period after birth, usually lasts from 2 to 3 weeks. If you have any of the listed symptoms that have stayed the same or gotten worse, and lasted more than 5 weeks, then you may be experiencing maternal depression or anxiety.

4. YOU DID NOTHING TO CAUSE THIS.

You are not a weak or bad person. You have a common, treatable illness. Research shows that there are a variety of risk factors that may impact how you are feeling, including your medical history, how your body processes certain hormones, the level of stress you are experiencing, and how much help you have with your baby. What we do know is, THIS IS NOT YOUR FAULT.

5. THE SOONER YOU GET HELP, THE BETTER.

You deserve to be healthy, and your baby needs a healthy mom in order to thrive. Don’t wait to reach out. Talk to someone you trust. HELP is available.

6. THERE IS HELP FOR YOU.

www.maternalmentalhealthnow.org
HABLA CUANDO ESTES DEPRIMIDA

1 LA DEPRESIÓN MATERNA Y LA ANSIEDAD SON COMUNES.

Es la complicación número uno del embarazo. En los EE.UU., entre el 15% y el 20% de las nuevas mamás, o aproximadamente 1 millón de mujeres, experimentan cada año trastornos perinatales del estado de ánimo y ansiedad. Algunos estudios sugieren que el número puede ser aún mayor.

NO ESTÁS SOLA.

La depresión materna puede afectar a cualquier mujer, independientemente de su edad, ingresos, cultura o educación.

2 PODRÍAS EXPERIMENTAR ALGUNOS DE ESTOS SÍNTOMAS.

- Sentimientos de tristeza o enojo.
- Cambios de humor: altibajos, sentirse abrumada.
- Dificultad para concentrarse.
- Falta de interés en las cosas que solías disfrutar.
- Ataques de pánico, nerviosismo y ansiedad.
- Excesiva preocupación por tu bebé.
- Pensamientos de hacerse daño a ti misma o a tu bebé.
- Temor de que no puedas cuidar a tu bebé.
- Sentimientos de culpa e insuficiencia.
- Dificultad para aceptar la maternidad.
- Pensamiento irracional; ver o escuchar cosas que no están allí.

Algunas de las formas en que las mujeres describen sus sentimientos incluyen:

Quiero llorar todo el tiempo.
Siento que estoy en una montaña rusa emocional.
Nunca me sentiré como yo misma otra vez.
No creo que le guste a mi bebé.
Todo se siente como un gran esfuerzo.

3 LOS SÍNTOMOS PUEDE APARECER EN CUALQUIER MOMENTO DURANTE EL EMBARAZO, Y HASTA EL PRIMER AÑO DEL NIÑO.

La tristeza del bebé, un período de ajuste normal después del nacimiento, generalmente dura de 2 a 3 semanas. Si tienes alguno de los síntomas enumerados que se mantuvo igual o empeoró y duró más de 5 semanas, puedes estar experimentando depresión o ansiedad materna.

4 NO HICISTE NADA PARA QUE ESTO PASARA.

No eres una persona débil o mala. Tienes una enfermedad común y tratable. La investigación muestra que hay una variedad de factores de riesgo que pueden afectar cómo te sientes, incluido tu historial médico, cómo tu cuerpo procesa ciertas hormonas, el nivel de estrés que estás experimentando y cuánta ayuda tienes con tu bebé. Lo que sí sabemos es que NO ES CULPA TUYA.

5 CUANTO ANTES RECIBAS AYUDA, MEJOR.

Mereces estar sana y tu bebé necesita una madre sana para prosperar. No esperes para buscar ayuda. Habla con alguien de confianza. LA AYUDA está disponible.

6 EXISTE AYUDA PARA TI.

Si estás pensando en hacerte daño a ti misma o al bebé, llama al 911 de inmediato.

Adaptado de Postpartum Progress, www.postpartumprogress.com, donde puedes obtener más información sobre las enfermedades mentales relacionadas con el parto. Este folleto también está disponible en inglés, chino y vietnamita.

产妇抑郁症和焦虑是常见的。它是孕期的头号并发症。在美国，每年有15%至20%的新生儿妈妈，即约100万名女性，会经历围产期情绪和焦虑症。有研究表明，这个数字可能更高。

您并不孤独。产妇抑郁症可以影响到任何女性，无论年龄、收入、文化或教育程度如何。

您可能会出现以下一些症状。

- 悲伤或愤怒的感觉。
- 情绪波动：情绪高低起伏，感觉不知所措。
- 集中注意力困难。
- 对您过去喜欢的事情缺乏兴趣。
- 睡眠和饮食习惯的改变。
- 恐慌症发作、紧张和焦虑。
- 过度担心您的宝宝。
- 有伤害自己或宝宝的想法。
- 担心自己不能照顾宝宝。
- 感到内疚和不足。
- 难以接受母亲的身份。
- 不理智的思考：看到或听到不存在的东西。

女性描述自己感受的一些方式包括：
- 我一直想哭。
- 我觉得自己的情绪变化就像坐过山车一样。
- 我再也感觉不到我自己了。
- 我觉得我的宝宝不喜欢我。
- 每件事都感觉要付出巨大努力。

孕期的任何时候都有可能出现症状，但通常会持续2-3周。如果您一直有以上所列举的任何一种症状或症状加重，并且持续5周以上，那么您可能正在经历产妇抑郁症或焦虑症。

您没有做任何导致这种情况的事情。

您不是一个弱者或坏人。您患有一种常见的、可以治疗的疾病。研究表明，有各种危险因素可能会影响您的感受，包括您的病史，您的身体处理某些激素的过程，您正在承受的压力程度，以及您对宝宝的帮助程度。据我们所知，这并不是您的错。

您越早得到帮助，就越好。

您值得健健康康的，而您的宝宝也需要一个健康的妈妈，他才能茁壮成长。不要等着他人。主动和您信任的人谈谈吧。您可以随时寻求帮助。

6 位新手妈妈 & 准妈妈都应了解的有关产妇抑郁症的事情

如果您有伤害自己或宝宝的想法，请立即拨打911。
Bệnh trầm cảm khi mang thai và sau sinh

Trên toàn thế giới, 1 trong 4 phụ nữ có thể sẽ bị trầm cảm, lo âu, rối loạn tâm trạng hay suy nghĩ tự hại bản thân trong thời gian mang thai hoặc sau sinh. Việc không nhận biết sớm và không điều trị có thể có ảnh hưởng nghiêm trọng đến sức khỏe của người mẹ và con. Hơn nữa, một trong năm bà mẹ chết là do trầm cảm sau sinh. Trầm cảm sau sinh có thể xảy ra sau thời gian sinh thường hoặc con đẻ bằng phương pháp khác.

Những triệu chứng của trầm cảm thường xuất hiện sau 3 tuần. Nếu bạn cảm thấy buồn bã, lo lắng, giảm hứng thú với hoạt động và thay đổi tư duy hoặc cách làm việc của bạn, hãy liên hệ với một chuyên gia y tế để được hỗ trợ.

1 | TRÊN TẤM CAM HOẠC LO LÀM KHI MANG THAI VÀ SAU SINH RẤT PHÓ BIỆN.

Bố là biến chứng số một của thai kỳ. Ở Mỹ, 15% đến 20% bà mẹ sinh con, tức khoảng 1 trong 5 bà mẹ, sẽ phải đối mặt với trầm cảm hoặc lo âu sau sinh. Một số nghiên cứu cho thấy con cời có thể chuyển vào con cować.

BẠN KHÔNG CÓ ĐƠN.

Trầm cảm khi mang thai và sau sinh có thể ảnh hưởng đến bất kỳ phụ nữ nào, bất kể tuổi tác, thu nhập, văn hóa hay giáo dục.

BẠN CÓ THỂ GẶP MỘT SỐ TRIỆU CHỨNG. Sau.

- Cảm thấy buồn bã, lo lắng, giảm hứng thú với hoạt động.
- Thay đổi tư duy hoặc cách làm việc của bạn.
- Không tập trung.
- Thiếu hứng thú với những hoạt động hoặc sở thích.
- Lo lắng quá mức về em bé.

Một số phụ nữ có thể mô tả cảm xúc của họ như sau:

- Khó chấp nhận việc làm mẹ.
- Cảm giác tội lỗi và không xứng đáng.
- Sợ rằng bạn không thể chăm sóc em bé.
- Tư duy vô lý; nhìn thấy hoặc nghe thấy những thứ không có thực.
- Có suy nghĩ tự hại bản thân hoặc em bé.
- Các cơn hoảng loạn và lo lắng.
- Thiếu hứng thú với những thứ bạn từng thích.
- Lo lắng quá mức về em bé.
- Khó tập trung.
- Thay đổi thói quen ngủ và ăn uống.
- Tâm trạng thất thường: lên và xuống, cảm thấy không ổn định.

6 ĐIỀU

Mỗi bà mẹ mới sinh và sắp sinh nên làm

Tìm hiểu về bệnh trầm cảm khi mang thai và sau sinh

www.maternalmentalhealthnow.org

TRIỆU CHỨNG CÓ THỂ XUẤT HIỆN BẤT CỨ LÚC NÀO KHI MANG THAI VÀ CHỌ ĐẾN KHI TRẺ ĐƯỢC MỘT TUỔI.

Hội chứng baby blues, một giai đoạn điều chỉnh sinh lý thường sau khi sinh, thường kéo dài từ 2 đến 3 tuần. Nếu bạn có bất kỳ triệu chứng nào ở trên vẫn không hết hoặc trở nên tồi tệ hơn và kéo dài hơn 5 tuần, thì bạn có thể bị trầm cảm khi mang thai hoặc sau sinh.

BẠN KHÔNG CÓ ĐƠN.

Trầm cảm khi mang thai và sau sinh có thể ảnh hưởng đến bất kỳ phụ nữ nào, bất kể tuổi tác, thu nhập, văn hóa hay giáo dục.

4 | CHUYỀN NAY KHÔNG PHẢI ĐÓ BẠN.

Bạn không phải là người yếu đuối hay xấu tính. Bạn bị một căn bệnh thông thường, có thể điều trị. Nghiên cứu cho thấy có nhiều yếu tố nguy cơ có thể ảnh hưởng đến cảm giác của bạn, như lịch sử y tế, cách cơ thể bạn xử lý một số hormone, mức độ căng thẳng mà bạn đang gặp phải và bạn chăm sóc em bé như thế nào. Nhưng gì chứng thứ nhất lại biết là, CHUYỀN NAY KHÔNG PHẢI ĐÓ BẠN.

CẢM THẤY BUỒN HOẶC LO LẤN.

- Cảm thấy buồn bã, lo lắng, giảm hứng thú với hoạt động.
- Thay đổi tư duy hoặc cách làm việc của bạn.
- Không tập trung.
- Thiếu hứng thú với những hoạt động hoặc sở thích.
- Lo lắng quá mức về em bé.

Một số phụ nữ có thể mô tả cảm xúc của họ như sau:

- Khó chấp nhận việc làm mẹ.
- Cảm giác tội lỗi và không xứng đáng.
- Sợ rằng bạn không thể chăm sóc em bé.
- Tư duy vô lý; nhìn thấy hoặc nghe thấy những thứ không có thực.
- Có suy nghĩ tự hại bản thân hoặc em bé.
- Các cơn hoảng loạn và lo lắng.
- Thiếu hứng thú với những thứ bạn từng thích.
- Lo lắng quá mức về em bé.
- Khó tập trung.
- Thay đổi thói quen ngủ và ăn uống.
- Tâm trạng thất thường: lên và xuống, cảm thấy không ổn định.

BẠN KHÔNG CÓ ĐƠN.

Bệnh trầm cảm hoặc lo âu có thể ảnh hưởng đến bất kỳ phụ nữ nào, bất kể tuổi tác, thu nhập, văn hóa hay giáo dục.

BẠN CẦN GIÚP ĐỠ CÀNG SỚM.

- Cảm thấy buồn bã, lo lắng, giảm hứng thú với hoạt động.
- Thay đổi tư duy hoặc cách làm việc của bạn.
- Không tập trung.
- Thiếu hứng thú với những hoạt động hoặc sở thích.
- Lo lắng quá mức về em bé.

- Khó tập trung.
- Thay đổi thói quen ngủ và ăn uống.
- Tâm trạng thất thường: lên và xuống, cảm thấy không ổn định.
Feeling anxious or depressed?

What every new mom and mom-to-be need to know

Many women experience depression and anxiety during pregnancy and after having a baby.

One in five California women

has symptoms of depression during or after pregnancy.

Symptoms

Feelings of depression after pregnancy, also known as baby blues, are common, last about two weeks and are considered normal. Symptoms can also occur during pregnancy or any time during your baby’s first year. But if your symptoms last longer than two weeks, are severe or get worse, please talk with someone you trust and see your health care provider.

- Anxiety and/or nervousness
- Sadness
- Excessive crying
- Mood swings
- Difficulty concentrating
- Lack of interest in things you typically enjoy
- Changes in sleeping or eating habits
- Excessive worry about your baby
- Feelings of guilt or inadequacy
- Difficulty accepting motherhood
- Thoughts of harming yourself or your baby
- Panic attacks
- Fear that you can’t take care of your baby
- Baby blues lasting longer than two weeks
- Irrational thinking, such as seeing or hearing things that are not there

MAY 2019
One in five California women has symptoms of depression during or after pregnancy. More Black and Latina women are affected, as well as women who don’t have support from family and friends. It’s important to know this can happen to any woman regardless of age, income, culture or education.

Depression during pregnancy can cause problems, like premature birth. Depression after baby is born can result in breastfeeding problems and the ability for mothers to bond with their infants. Depression at any time during pregnancy or baby’s first year can cause marital issues and can also affect mom-baby-family bonding, which can increase the risk of long-term mental and emotional problems in children.

More and more health care providers are screening for depression as part of your prenatal and postpartum care. However, do not wait for screening if you are experiencing symptoms beyond normal baby blues. The sooner you get treatment, the better.

Asking for help is a sign of strength. If you’re having any symptoms, now is the time to reach out to a trusted professional who can guide you through treatment. Talk to your family and friends for support. Remember, you did nothing to cause this, and there is no shame in asking for help—for your well-being and the health of your baby. For more information and maternal mental health resources, visit: www.cdph.ca.gov/MaternalMentalHealth

¿Se siente ansiosa o deprimida?

Lo que todas las nuevas mamás y mamás necesitan saber

Muchas mujeres expresan depresión y ansiedad durante el embarazo y después de tener a su bebé.

Síntomas

Los sentimientos de depresión después del embarazo, también conocidos como “baby blues”, son comunes, duran unas dos semanas y se consideran normales. Los síntomas también pueden ocurrir durante el embarazo o en cualquier momento durante el primer año de su bebé. Pero si los síntomas duran más de dos semanas, son severos o empeoran, por favor hable con alguien en quien confíe y vea a su proveedor de atención médica.

- Ansiedad y/o nerviosismo
- Tristeza
- Llanto excesivo
- Cambios de humor
- Dificultad para concentrarse
- Falta de interés en las cosas que típicamente disfruta
- Cambios en los hábitos alimenticios o de dormir
- La preocupación excesiva sobre su bebé
- Sentimientos de culpabilidad o inadecuación
- Dificultad para aceptar la maternidad
- Pensamientos de lastimarse a usted misma o a su bebé
- Ataques de pánico
- Teme que no pueda cuidar a su bebé
- “Baby blues” que duran más de dos semanas
- Pensamientos irracionales, como ver u oír cosas que no existen

MAY 2019
No está sola

Una de cada cinco mujeres de California tiene síntomas de depresión durante o después del embarazo. Mujeres Afro-Americanas y Latinas se ven afectadas más, así como mujeres que no tienen el apoyo de familiares y amigos. Es importante saber que esto le puede suceder a cualquier mujer sin importar la edad, los ingresos, la cultura o la educación.

El tratamiento es bueno para la mamá, el bebé y toda la familia

La depresión durante el embarazo puede causar problemas, como el parto prematuro. La depresión después del nacimiento del bebé puede dar lugar a problemas de lactancia materna y a la capacidad de las madres de vincularse con sus bebés. La depresión en cualquier momento durante el embarazo o el primer año del bebé puede causar problemas matrimoniales y también puede afectar el vínculo entre la madre y el bebé-familia, lo que puede aumentar el riesgo de problemas mentales y emocionales a largo plazo en los niños.

La mayoría de las mujeres que reciben tratamiento se recuperan completamente

Más y más proveedores de atención médica están examinando para depresión como parte de la atención prenatal y posparto. Sin embargo, no espere a que se realice el examen si muestra síntomas más allá de los “baby blues” normales. Cuanto antes reciba tratamiento, mejor.

La ayuda está disponible

Pedir ayuda es un signo de fuerza. Si tienes algún síntoma, ahora es el momento de ir con un profesional de confianza que pueda guiarte a través del tratamiento. Hable con su familia y amigos para obtener apoyo. Recuerde, no hizo nada para causar esto, y no hay vergüenza en pedir ayuda, para su bienestar y la salud de su bebé. Para obtener más información y recursos de salud mental materna, visite: www.cdph.ca.gov/MaternalMentalHealth

SUPPORTING FATHERS’ MENTAL HEALTH

Did you know?

• **One in 10** fathers get Paternal Postpartum Depression (PPPD);
• Up to **16 percent** of fathers suffer from an anxiety disorder during the perinatal period.

Helping dads be at their best—physically and mentally—during early childhood has a big impact on children’s health.

Studies show that **FATHER INVOLVEMENT LEADS TO CHILDREN WHO:**

- are more ready for school
- have a better vocabulary
- have better social skills
- are better able to regulate their emotions

**FATHER INVOLVEMENT HELPS MOMS TOO**

- It increases both parents’ confidence
- It helps both parents be more responsive to their baby
- It decreases mothers and fathers’ potential for mental health issues

How Can Health Professionals Help Fathers?

1. Screen for paternal depression during well-child visits
2. Connect dads with resources and interventions

Every Woman OC is a resource for anyone who is thinking of becoming pregnant, is pregnant, or has a new baby. Our goal is to provide you with information and resources necessary to experience pregnancy and parenting in a safe and healthy way.

www.everywomanoc.org

The Orange County Perinatal Council (OCPC) is dedicated to supporting optimal perinatal health and wellness for Orange County’s women and babies – before, during and after birth.

For additional information, visit www.everywomanoc.org or contact the Health Referral Line at (800) 564-8448.
Taking good care of your body and mind will prepare you for pregnancy and give your baby a healthy start. Even if you decide not to become pregnant now or in the future, this information will help you to live a healthy lifestyle.

If you are pregnant, it's important to start planning and making healthy choices for your growing family. The decisions you make now will help your baby have a happy, healthy life.

The postpartum period refers to the first six weeks after childbirth. It is a period of healing and adjustment. During these weeks, you'll bond with your baby and have a post-delivery checkup with your doctor. Take care of your baby and yourself by making good choices and staying healthy.
Cada Mujer OC es un recurso para cualquier persona que está pensando en embarazarse, o está embarazada o tiene un nuevo bebé. Nuestro objetivo es proporcionarle información y los recursos necesarios para una experiencia segura y saludable de embarazo y de la crianza de los hijos.

www.sp.everywomanoc.org

El consejo Perinatal Council del Condado de Orange, (OCPC por sus siglas en inglés) tiene el compromiso de apoyar a las mujeres y los bebés del Condado de Orange para que gocen de bienestar y de óptima salud perinatal.

Para obtener información adicional, visite www.sp.everywomanoc.org o comuníquese con la Línea de Referencia de Salud llamando al (800) 564-8448.
Las mujeres en las etapas de preconcepción, prenatal y posparto pueden encontrar información sobre:

- Servicios médicos
- Alimentación saludable y ejercicios
- Mente sana y relaciones
- Consumo de sustancias
- Entorno laboral y del hogar
- Cuidado del bebé

Para obtener información adicional, visite [www.sp.everywomanoc.org](http://www.sp.everywomanoc.org) o comuníquese con la Línea de Referencia de Salud (Health Referral Line) llamando al (800) 564-8448.

---

**Pensando en quedar embarazada**

Cuidar bien de su cuerpo y mente la preparará para el embarazo y le dará a su bebé un comienzo saludable.

Incluso si decide no quedar embarazada ahora ni en el futuro, esta información la ayudará a vivir un estilo de vida saludable.

---

**Embarazada**

Si está embarazada, es importante comenzar a planear y tomar decisiones saludables para su familia.

Las decisiones que tome ahora contribuirán a que su bebé tenga una vida feliz y saludable.

---

**Después de dar a luz y el primer año del bebé**

El período de posparto se refiere a las primeras seis semanas después del parto. Es un período de recuperación y adaptación.

Durante estas semanas, usted formará un vínculo emocional con su bebé y se hará un chequeo después del parto con su médico. Cuide a su bebé y de sí misma al tomar buenas decisiones y mantenerse saludable.
Depression and anxiety are hard on families. Stress from COVID-19 can make these worse. 1 in 5 moms and 1 in 10 dads in OC are affected during their baby's first year.

The best gift you can offer is the help to H.E.A.L.

**Hope**
Let them know they are not alone and they WILL get better.

**Empathy**
Listen and don't judge. Understand his/her feelings — it's not wrong to feel.

**Action**
Help them rest. Bring food. Clean up. Help with the baby.

**Local Help**
Tell them the sooner they get help, the better for themselves and their baby.

If things get worse, call a doctor or 9-1-1

To learn how to help the baby during this time, visit HelpMeGrowOC.org or call 1-866-476-9025

To help a parent or family member, visit NAMIOC.org or call the OC Warmline at 714-991-6412.

Pritzker Children’s Initiative (PCI)

The Pritzker Children’s Initiative (PCI), a project of the J.B. and M. K. Pritzker Family Foundation, is committed to building a promising future for our country by investing in and supporting solutions in early childhood development for children prenatal to age three, with the goal of every child reaching kindergarten ready to learn.

The National Collaborative for Infants and Toddlers (NCIT)

Funded through the Pritzker Children’s Initiative, NCIT brings together national partners, early childhood leaders, philanthropy, policymakers and practitioners inside and outside state and local government to create and strengthen promising policies and programs, and share what works, so that more states and communities can support the healthy development of our youngest children. I would suggest using the positioning statement from the NCIT framework, here’s how it reads: The National Collaborative for Infants and Toddlers is committed to advancing policies and programs to ensure all families have the support they need to give their infants and toddlers a strong foundation for success in school and life. To learn more, visit NCIT.org.
