THE 27 ${ }^{\text {TH }}$ ANNUAL REPORT ON THE

# CONDITIONS OF CHILDREN IN ORANGE COUNTY 

## LETTER FROM THE CHAIR

I am honored to chair the Orange County Children's Partnership and to work with our many partners to be a unified voice for children and families, championing health, education, safety and economic stability by advancing more responsive services that effectively meet their needs.

For the last two years, our children have had to adapt to online learning, tutoring needs, food insecurity, parents serving as teachers and many other stressors to their mental health.

To address the needs of Orange County's children, our office helped organize the virtual Conditions of Children Mental Health and COVID-19 Forum. The Orange County Health Care Agency and Social Services Agency did an outstanding job in providing an overview of the children's mental health needs in Orange County and ways to support our youth. In addition to our forum, Supervisors Lisa Bartlett and Donald P. Wagner also organized forums on the topics of mental health well-being and resources.

The pandemic is far from over, so we must continue to provide all the support we can to ensure our children are living a healthy life - whether it is providing Wi-Fi hotspots or digital services to support distance learning, having mental health services available for those impacted by the pandemic or providing food to those in need. On the following pages, we highlight the many ways the community expanded, improved or created initiatives during the pandemic across all sectors and partners.

While we are uncertain of what lies ahead, the Orange County Children's Partnership is committed to doing everything we can to ensure Orange County's children flourish. I hope that this report will aid and guide you by providing critical data and information, and that you will join me and the Orange County Children's Partnership in our work to make Orange County a place where children and families thrive.

Yours truly,

Doug Chaffee, Chair
Orange County Children's Partnership

## EXECUTIVE SUMMARY

## The 27th Annual Report on the Conditions of Children in Orange County compiles indicators across four interdependent focus areas including Good Health, Economic Well-Being, Educational Achievement and Safe Homes and Communities to highlight trends in how children are faring.

It is important to note that the data in this report largely reflects conditions before the onset of the novel coronavirus-2019 (COVID-19). To some extent, the pandemic will create new baselines from which to measure future progress made on conditions. Many data sources have experienced delays in 2020 data releases, such as school districts that were unable to collect some data due to the suspension of in-person classes and standardized testing. Consequently, a data-driven understanding of the impacts of the pandemic are only beginning to emerge. The report's special section explores Orange County's proactive response to the known and perceived impacts of this public health crisis.

Prior to COVID-19, Good Health trends revealed a continued decline in uninsured children and teen birth rates. In Economic Well-Being, while poverty among children declined, those eligible for but not receiving CalFresh and WIC increased. Pre-pandemic data for Educational Achievement revealed fewer students dropping out of high
school, and more likely to be college-ready. Within Safe Homes and Communities, the number of juvenile arrests, sustained petitions and gang-related prosecutions continue to decline year-over-year.

The behavioral health of children remains a concern. While the hospitalization rate for behavioral health conditions increased by $88 \%$ over 10 years, we know that hospitalizations alone do not illustrate the complexity of behavioral health needs and outcomes. This year, the report expands what is tracked to include early childhood social and emotional health as well as adolescents experiencing chronic sadness, receiving psychological counseling or being hospitalized for behavioral health issues.

Finally, the report continues to bring disparities more clearly into view - revealing both the progress made and struggles experienced among Orange County's children. Now, more than ever, we must focus on reducing gaps in children and youth outcomes to ensure that all children thrive.

## SUPPORTING RESILIENCY: Addressing the Impact of COVID-19 on Children's Health and Well-Being

The COVID-19 pandemic presents the most profound disruption to daily life in generations. For children, this disruption can include changes to physical and mental health, schooling and their families' economic stability. A recently published literature review ${ }^{1}$ on family resiliency during the COVID-19 pandemic demonstrates that the magnitude of family resiliency is complex and determined by many factors, several of which are the same that predict other health outcomes (e.g., educational and socioeconomic status). While the impact of the pandemic is great, the Orange County community rallied swiftly and wholeheartedly to meet children's needs and ensure the best hope for a resilient and bright future well beyond the pandemic.

COVID-19 in Orange County
Overall, Orange County reported 292,124 COVID-19 cases and 5,326 deaths at the time this report went to print on September 13, 2021. ${ }^{2}$ The rate of COVID-19 cases among children ages 0 to 17 years was 386.3 per 100,000 in Orange County compared to California (640.8) and the United States (417.1). ${ }^{3}$ Youth ages 0 to 17 years account for 6.5 percent of all cases.
Even with long-standing federal, state and local support for families, the COVID-19 pandemic highlighted how some families continue to disproportionately face challenges accessing services to support health and wellness. Among children who have contracted COVID-19 with known race and ethnicity, Orange County trends suggest similar disparities with $79.8 \%$ of the cases among minority populations ages 0 to 17 years.

Note: Percent cases are among children 0 to 17 years with known race and ethnicity. As of September 13, 2021, 73.3\% $(24,138)$ of the COVID-19 cases among youth have a known race and ethnicity.

Of the more than 3.1 million residents living in Orange County, as of September 13, 2021, approximately $68 \%$ had received at least one dose of COVID-19 vaccine and approximately $61 \%$ were fully vaccinated with two doses. ${ }^{4}$ Children 0 to 11 years are not eligible for the vaccine and represent $14.4 \%$ of the total Orange County population and $65.1 \%$ of children and youth. Among youth 12 to 17 years, approximately $64 \%(156,859)$ have received at least one dose of vaccine, representing $4.8 \%$ of the total Orange County population vaccinated. ${ }^{5}$

YOUTH AGE 12 TO 17: 64\% $(156,859)$ HAVE RECEIVED AT LEAST ONE DOSE OF COVID-19 VACCINE

## The Impact on Children's Mental Health and Well-being

According to a survey conducted by the Orange County Health Care Agency (HCA) Behavioral Health Services, Mental Health Services Act Office in Fall 2020, almost 51\% of parents indicated that their child (four to 17 years old) was experiencing significant issues related to anxiety and depression. ${ }^{6}$ Children and families sought different kinds of supports, with the most common type of informal support provided by family, friends and social networks. One in four families sought professional health care, including from a pediatrician, therapist or psychiatrist, regarding their child's stress or emotions. Therapists were the go-to source of support for families (58\% of families who sought professional support from a therapist received help), followed by pediatricians ( $49 \%$ ) and psychiatrists ( $21 \%$ ). Nearly one in five ( $18 \%$ ) parents faced two or more barriers when accessing care, with the most common barrier for children being inconvenient or delayed appointment times ( $11 \%$ ) and a need or preference for face-to-face services (12\%).?

## ORANGE COUNTY: "All-in" Response to COVID-19

## Community Partners Increase Connection to Mental Health Resources

The Orange County Department of Education (OCDE), in partnership with HCA and local school districts, created a countywide network of seven new regional mental health coordinators to work closely with school districts to increase access to local mental health services. While plans were already underway prior to the pandemic to create this network with funding from the Mental Health Student Services Act, the program has become even more relevant due to the increased need for student mental health services as a result

County providers invested in youth resilience strategies, programs and resources to support the community including:

- Understanding how to support children and youth as they transition back to in-person learning
- Building awareness of the warning signs of mental health challenges
- Increasing communication and opportunities for open conversation about mental health with youth

## ACEs Aware Grantees in Orange County

- Orange County Department of Education (OCDE)
- Children's Hospital of Orange County (CHOC)
- American Academy of Pediatrics Orange County Chapter
- Early Childhood OC
- The Raise Foundation

Several Orange County organizations received funding through ACEs Aware to implement local initiatives for the prevention and treatment of trauma-induced toxic stress. ${ }^{9}$ ACEs Aware funds are being used across partnerships to help educate local communities about the importance of screening for ACEs. The primary goal is to remove barriers and provide much needed mental health services using trauma-informed approaches. Additionally, Orange County, through its Medi-Cal managed care partner CalOptima, had the highest percentage lamong Medi-Cal programs in California) of ACE screenings delivered to children in the first nine months of 2020, with more than $11 \%$ CalOptima members between age 0 and 20 screened.

## Public Service Plays New Role as Mandated Reporters

School closures and the move to virtual services reduced the number of child abuse reports from education settings, including childcare providers and teachers. In May of 2020, shortly after the near-complete shutdown of Orange County, the total number of referrals was 1,731, down 52.1\% from 3,617 referrals in May 2019. Referrals from law enforcement nearly doubled to $23 \%$ of calls and another $23 \%$ were made by counselors/ therapists. Meanwhile, referrals from schools/

PERCENT OF CHILD ABUSE REFERRALS BY TYPE OF REPORTER

teachers were $14.2 \%$ lower in May 2020 at 9\% compared to May 2019 at 29\% of referrals. In May of 2021, calls began to inch back towards the pre-pandemic call volume as schools re-opened. However, it is interesting to note that counselor/ therapist as a referral source remained high.

## CalFresh Reaches New Families

Orange County organizations that have historically provided safety net services and resources for families and children experiencing economic and health challenges continued to mobilize to meet the growing demand.

TOTAL CALFRESH APPLICATIONS RECEIVED, FY18/19 TO FY20/21

Note: Each icon = 2,000 applications

Prior to COVID-19, it was estimated that 59.0\% of people in Orange County eligible for CalFresh received that benefit. ${ }^{11}$ While the average number of monthly new applications received decreased $3.3 \%$ between FY19/20 and FY20/21, the average number of applications received is still higher than the monthly average before the pandemic (8,523 in FY18/19).

Additionally, the average number of continuing cases increased by 6.6\% in FY20/21 compared to the prior year indicating that once the benefits were received, individuals and families stayed on them longer than previously. Moreover, the average household benefit amounts have increased during COVID-19 emergency allotments,

13-17 Years

Note: Each icon = 12,000 cases
with a $99 \%$ utilization rate of those benefits, meaning that recipients are accessing benefits as they receive them.

The average number of persons receiving CalFresh increased $8.2 \%$ to 232,201 people in FY20/21 from 214,668 in FY19/20. The proportion of CalFresh beneficiaries under 18 in Orange County increased 1\% to 91,088 children in FY21, up from 90,263 in FY19/20. Children 13 to 17 years drove the slight increase in the average number of CalFresh beneficiaries under 18, increasing 8.5\% from 24,497 in 2019/20 to 26,576 in 2020/21.

Community Discussions on Mental Health and Well-Being During the Pandemic

Unlike previous years, due to the COVID-19 pandemic, it was not possible to hold community town hall events to present findings from and discuss the Annual Conditions of Children in Orange County Report. As an alternative, and for the first time, Board of Supervisor Offices, along with the Orange County Children's Partnership (OCCP), convened health and community partners, advocates for children, youth and families, and members of the community of all ages in virtual conversations.
The OCCP convened two virtual forums and participated in a town hall in March 2021, discussing topics ranging from the changing mental health needs across the child and youth lifespan, to maternal depression, teen suicide and the impact of COVID-19 on children and families. The virtual forums afforded the opportunity for a broader representation of participants,
resulting not only in greater dissemination of data, but a wider audience for information and resource sharing on important and diverse topics. Additionally, the alignment of the forums with the release of a COVID-19 vaccine, brought an urgency among the community to reflect on the impact of and recovery from the pandemic.
An Orange County Youth Town Hall shared data and insights from the report and had a focus on youth mental health. ${ }^{12}$ The townhall provided a platform for schools, families and students to dialogue about Orange County resources that address stressors and lead to the healthy development of protective factors, to promote health among students.
Another forum took a broad look at health and mental health across the age span, using data from the report as the springboard. This forum engaged speakers with expertise in the early years, with a presentation on the Triple P Online parenting program, The Orange County Perinatal Mood and Anxiety Disorder Collaborative, perinatal mental health toolkit, as well as Parenting in Uncertain Times, exploring challenges faced by parents during the pandemic. Specific emphasis was placed on the prevention of long-term mental health impacts on children and teenagers through family support services.
A subsequent forum on children and youth health and emotional well-being was held with an eye towards identifying the most pressing issues of youth and families during these extraordinary times. County leadership and panelists discussed how to identify the correct resources for each
individual. While each forum approached health and well-being through a slightly different lens, all three brought to the forefront, the knowledge that the impacts of the COVID-19 pandemic were not equally experienced.

## Rebounding from the Pandemic

COVID-19 has presented an opportunity to better address disparities and improve health outcomes for children and families through collaborative and thoughtful transformative efforts. While the pandemic has given families and communities an opportunity to demonstrate strength and community solidarity and support, it has also allowed us to see that not all families and communities have the same opportunities to be resilient and resourceful. The pandemic has also demonstrated how children can be inadvertently and negatively impacted by the manifestations of a community in crisis. For example, access to childcare and preschool was reduced by the permanent closure of 126 Family Child Care Providers and 26 Child Care Centers; the closures were attributable, in large part, to COVID-19.13

Rebounding from this devastating pandemic will require a commitment to ensure the health and safety of children and families through a critical assessment of pain points related to equity and diversity. A commitment to families must lead to a new legacy of child well-being, accomplished through partnerships across multi-faceted sectors and include:

- Family, child and community prioritization
- Moving from secondary prevention to primary prevention with culturally and ethnically appropriate programming
- A commitment by public health to measure and improve quality of programs that affect the wellbeing of families across the social determinants of health and throughout the lifespan
- Maximizing multi-collaborative strategies, moving away from addressing risk factors, and addressing familial challenges and adversity, to a model which invests in protective factors to ensure families thrive

Data Driven Approach to Address Inequality and Resource Disparities in Orange County

In 2021, HCA launched the OC Equity Map to measure progress made as a community towards improving the quality of life for every resident of Orange County. ${ }^{14}$ Publicly launched in July 2021 to deliver sustainable and responsive services that promote population health and equity, the OCEM captures population outcome data in three broad dimensions: Basic Human Needs, Foundations of Well-being and Opportunity. Access to the OCEM platform is free to the public and allows users to measure, track and map inequities in the community by neighborhood, including identifying root causes and understanding social determinants of health and well-being. The COVID-19 Testing Ad-Hoc Committee, led by Chairman Andrew Do and Vice Chairman Doug Chaffee, and the COVID-19 Vaccine Task Force, led by Vice Chairman Doug Chaffee, have championed the use of this map to assist with the COVID-19 response, including testing, vaccine allocation and distribution, and other mitigation strategies.

New Analysis for Some Conditions of Children Indicators

Due to the COVID-19 pandemic and a temporary shift to remote learning, six of the 27 indicators described in this report lacked data for an update to the 26th Annual Conditions of Children report.
These indicators include:

- Obesity
- Physical Fitness and Nutrition
- Kindergarten Readiness
- Third Grade Mathematics
- Third Grade English Language Arts (ELA)
- Chronic Absenteeism

The report utilized the Equity Ratio to provide further analysis of the data. The Equity Ratio is a method used to disaggregate data to better understand the representation of population groups who disproportionately experience negative health, education, social and well-being outcomes. It can be used as a tool to identify disparities in outcomes and promote equity.
An interpretation of the Equity Ratio itself provides a comparison of the level of one group to the average of all the other groups, including a consideration of the different population sizes. ${ }^{15}$

LIKELIHOOD OF MEETING/EXCEEDING THIRD GRADE ELA STANDARDS, BY RACE/ETHNICITY
Overall Achievement in ELA Among Third Grade Students, by Race/Ethnicity, 2019

- Standard Exceeded/Met within each Race/Ethnicity
- Likelihood of Exceeding/Meeting the Standards compared to other Race/Ethnicities
Note: Third grade student enrollment by race/ethnicity is 50.5\% Hispanic or
Note: Third grade student enrollment by race/ethnicity is $50.5 \%$ Hispanic or Latino, 24.1\% White, 16.1\% Asian, 4.7\% Multiracial, 1.8\% Filipino, 1.2\% AArican
American, 0.3\% Pacific sslander, 0.2\% American Indian or Alaska Native and $1 \%$ American, $0.3 \%$ Pacitic/ Iflander, $0.2 \%$ American Indian or Alaska Native and $1 \%$
Not Reported. Black/African American, Filipino, American Indian/Alaska Native and Native Hawaiian or Pacific Islander third grade student enrollment is less than $2 \%$ of all 3rd grade student enrollment.
Source: CAASPP, 2018/19 (2019)

For instance, in Orange County, while 39\% Hispanic or Latino third graders meet/exceed ELA standards, they are 47\% less likely to meet/exceed ELA standards compared to non-Hispanic or Latino third graders. On the other hand, while $80 \%$ of Asian third graders meet/exceed ELA standards, Asian third graders are 56\% more likely to meet/ exceed ELA standards compared to third graders who are not Asian.

It is important to note that there are many social and environmental factors that drive the findings of the Equity Ratio calculation. The OC Equity Map referenced above is one way to better understand the environment in which children and families live. The OC Equity Map's Social Progress Index combines 50 indicators that collectively measure residents' access to basic human needs, foundations of well-being and opportunity. The Social Progress Index illustrates the relative strengths and weaknesses of various geographic areas within Orange County, which provides helpful contextual information about factors that may influence where children fall on the Equity Ratio's likelihood scale.

Using a relative rate of representation such as the Equity Ratio as a measure of racial disparity offers Orange County's community leaders and policymakers a valuable and much needed tool for the identification, tracking and subsequent discussion of racial/ethnic disproportionality in child health and well-being.

## Attention:

Data challenges during the pandemic have included disruptions in data collection in schools due to remote learning and/or hybrid learning models.

Additionally, response to COVID-19 and its socioeconomic impact on children and families may present anomalies in trends. As examples, rates of students eligible for Free and Reduced Priced Lunch, substantiated child abuse reports or CalWORKs and CalFresh beneficiaries may show a change in trends that are reflective of COVID-19, and not necessarily a trend that will be sustained.

# ACCESS TO HEALTH CARE 

# RECENT RATES OF UNINSURED CHILDREN CREEP UP REPRESENTING NEARLY 29,000 CHILDREN IN 2019. 

#### Abstract

DESCRIPTION OF INDICATOR This indicator reports the number and percentage of children 18 and younger ${ }^{1}$ who are uninsured; the number and percentage who do not have a usual source of care; and those who experienced delayed care or did not receive medical care or prescription medications.

## Why is this indicator important?

Improving health care access for all children helps to improve prevention, early diagnosis and treatment of health problems. Children with health insurance are more likely to get timely prescription medications and medical or mental health care when needed; are more likely to get preventive care lincluding immunizations, dental care and vision screenings); and, overall, have better health outcomes.

## Findings

- In 2019, 4.0\% of children in Orange County were uninsured, representing a drop in uninsured rates by $59.0 \%$ since 2010 ( $9.8 \%$ ). Compared to the year prior, the percentage of uninsured children increased by $36.3 \%$ (from 2.9\%).
- Orange County had a higher rate of uninsured children ( $4.0 \%$ ) compared to California (3.6\%). For the sixth consecutive year, Orange County's rate is lower than the United States ( $5.7 \%$ in 2019). Like Orange County, the United States and California experienced an increase in the percent of uninsured children from 2018 to 2019.
- Hispanic children continue to have higher uninsured rates than other racial/ethnic groups with $5.2 \%$ uninsured in 2019, compared with Asian children (3.2\%), White children (3.1\%) and children of Other races (1.3\%).
- Uninsured percentages of young children (0-5 years old) have dropped overall by 60.3\%, from $7.6 \%$ in 2010 to $3.0 \%$ in 2019. Similarly, rates of uninsured 6 to 18-year-olds have dropped by 59.2\%, from $10.7 \%$ in 2010 to $4.4 \%^{2}$ in 2019. However, neither younger nor older children have recovered from an increase in the rate of uninsured children in 2017. That said, the rate increases from 2017 to 2019 may be attributable to a change in reported age groups ${ }^{1}$.
- In addition, the California Health Interview Survey (pooled estimate for 2016-2020) reveals:
- An estimated 9.2\% of Orange County children annually did not have a usual source of care to go to when they were sick or needed health advice.
- Approximately 5.8\% of Orange County children experienced a delay or lack of medical care and $3.3 \%$ experienced a delay or lack of needed prescription medications.
- Most Orange County children who had access to a usual source of care went to a doctor's office ( $74.5 \%$ ), while $14.3 \%$ usually went to a clinic or community hospital. The proportion of children who regularly visited an Emergency Department, urgent care center or some other location and those without a usual source of care was 11.3\%.

Percent of Children Uninsured, by Race/Ethnicity 2011 to 2019

Increases in the percent of uninsured children in 2017 and 2019 may be attributable to change in
reported age groups. See footnote 1.

Percent of Children 18 Years and Younger Who Were Uninsured, by Community of Residence 5-Year Average, 2019

## EARLY

# AFTER SEVERAL YEARS OF INCREASE, EARLY PRENATAL CARE RATES DROP IN 2019. 

## DESCRIPTION OF INDICATOR

This indicator tracks the number and percent of infants born to women whose prenatal care began during the first trimester (the first three months) of pregnancy.

## Why is this indicator important?

Getting regular prenatal care as soon as a woman knows she is pregnant improves the potential for a healthy pregnancy resulting in a full-term baby. Ideally, this care should begin with a preconception care visit to a health care provider. Prenatal care provides screening and management of a woman's risk factors and health conditions to reduce pregnancy complications, as well as education and counseling on healthy behaviors during and after pregnancy. ${ }^{1}$ While the value of initiating prenatal care during early pregnancy is not disputed, evidence equating late prenatal care with adverse pregnancy outcomes is limited. Additionally, certain genetic, behavioral, social, environmental and other factors can also adversely affect the ability to have a healthy, fullterm baby. Still, late prenatal care or no prenatal care has been associated with risk of maternal death in all women (especially in minorities), increased rates of preterm delivery, low birth weight and congenital malformations. ${ }^{2}$

## Findings

- In 2019, Orange County's rate of women receiving early prenatal care was $87.0 \%$. This rate is down $1.4 \%$ since 2018 but remains higher than both California (85.7\%) and the United States' (77.0\%) in $2019 .{ }^{3}$
- The percent of women receiving early prenatal care was beginning to rebound after a low of $84.4 \%$ in 2016. However, the recent fluctuation in rates may be correlated with an ongoing increase in self-pay deliveries. ${ }^{4}$
- Self-pay deliveries are those paid through cash payment rather than health insurance and are often associated with foreign visitors that travel to the U.S. to give birth. These women generally arrive in the U.S. late in their pregnancy and leave shortly after giving birth; therefore, these births typically have no recorded prenatal care. In 2019, there were 3,946 self-pay deliveries in Orange County, an increase from 643 in 2010. Nearly 33.5\% of self-pay deliveries in Orange County in 2019 were among Asian/Pacific Islander women.
- When self-pay deliveries are excluded, the percent of women who received early prenatal care in Orange County in 2019 increases from 87.0\% to 88.6\%.
- With self-pay deliveries excluded, 93.7\% of White women received early prenatal care followed by Asian (88.2\%), Black (86.4\%) and Hispanic (85.1\%) women. Early prenatal care rates for each race/ ethnicity continue to remain steady with the exception of Asian/Pacific Islander women with $3.2 \%$ fewer women receiving early prenatal care from 2018 to 2019 ( $91.4 \%$ to 88.2\%).

# SINCE 2017, INFANT MORTALITY RATES HAVE DECREASED IN ORANGE COUNTY. 

## DESCRIPTION OF INDICATOR

> The infant mortality indicator refers to deaths of infants under one year of age. The number and rate of infant mortality is calculated per 1,000 live births per year.

## Why is this indicator important?

The infant mortality rate is a widely-used indicator of societal health because it is associated with maternal health, quality of and access to medical care, socioeconomic conditions and public health practices. Improvements in the infant mortality rate may reflect progress in medical technology, hygiene and sanitation systems, economic well-being and the availability and use of both preventive and clinical health services. ${ }^{1}$ Despite the overall declines in infant mortality since 2002, there remain significant disparities in the rates among Hispanic infants in Orange County, which remain higher than the overall county rate. In the past, these disparities were only partially explained by factors such as adequacy and quality of prenatal care.

## Findings

- In 2019, there were 102 infant deaths in Orange County. ${ }^{2}$
- The infant mortality rate was 2.9 deaths per 1,000 births in 2019, a $27.5 \%$ decrease since 2010. This rate is lower than California's rate of 4.1 and the United States' rate of 5.7. ${ }^{3}$ In 2019, the infant mortality rate in Orange County and California were the lowest it has been in the last 10 years.
- Leading causes of infant mortality were maternal causes ${ }^{4}$ ( $25.5 \%$ ), congenital anomalies (birth defects) ( $24.5 \%$ ), other conditions of the perinatal period ( $24.5 \%$ ), all other causes ( $11.8 \%$ ), and short gestation/low birth weight ( $9.8 \%$ ).
- In 2019, disparities among races and ethnicities remained. Infant mortality rates (per 1,000 live births) were highest among Hispanic (4.4) infants, followed by White (1.9) and Asian (1.5) infants.

## LOW BIRTH WEIGHT

## LOW BIRTH WEIGHT RATES CONTINUE TO INCREASE ACROSS ALL RACIAL AND ETHNIC GROUPS TO 6.8\% OF ALL BIRTHS.

## DESCRIPTION OF INDICATOR

This indicator reports the total number of low birth weight infants and very low birth weight infants as a proportion of the total number of births. Low birth weight is defined as infants born weighing less than 2,500 grams ( 5 pounds, 8 ounces). Very low birth weight infants are defined as a subset of low birth weight infants born weighing less than 1,500 grams (3 pounds, 5 ounces).

## Why is this indicator important?

Low birth weight infants have an increased risk of experiencing developmental problems and delays. In addition, these infants are at higher risk for serious illness, disability, lifelong health difficulties and are more likely to die before their first birthday. ${ }^{1}$ Amongst very low birth weight infants, the risks are higher and the negative outcomes more severe, especially the risk of death in the first year - $22 \%$ compared to $1 \%$ for low birth weight infants. ${ }^{2}$ The primary causes of low birth weight are premature birth and fetal growth restriction. Risk factors for low birth weight include smoking, alcohol/drug use during pregnancy, multiple births, poor nutrition, maternal age, socioeconomic factors, domestic violence and maternal or fetal infections.

## Findings

- In 2019, there were 34,963 births to residents in Orange County, of which $6.8 \%(2,377)$ were low birth weight infants, the highest it has been in the last 10 years.
- Overall, the Orange County rate remains lower than the 2019 rate for California (7.1\%) ${ }^{3}$ but higher than the 2018 rate for the United States (5.7\%) ${ }^{4}$.
- Very low birth weight infants comprised 1.0\% (357) of the total births in Orange County.
- When assessed by race/ethnicity, the percent of low birth weight infants within each group were: Black (11.1\%), Hispanic (7.3\%), Asian (6.7\%) and White ( $5.8 \%$ ) infants. Percent of low birth weight infants increased across all race/ethnicity groups between 2018 and 2019.

# PRETERM BIRTH RATES INCREASED FOR ALL RACES AND ETHNICITIES BETWEEN 2018 AND 2019. 

## DESCRIPTION OF INDICATOR

> This indicator reports the percentage of total annual births which are preterm. Preterm birth is defined as the delivery of an infant at less than 37 weeks of gestation, the period of time between conception and birth. Late preterm births (occurring between 34 to 36 weeks of gestation), moderate preterm births (occurring between 32 to 33 weeks of gestation) and very preterm births (occurring less than 32 weeks of gestation) are subsets of preterm births. ${ }^{1}$

## Why is this indicator important?

Preterm birth is an important public health issue requiring sustained focus on its causes, consequences and prevention strategies. ${ }^{2}$ Several factors - economic, personal, medical and behavioral - may increase the likelihood that a woman has preterm labor and delivers early. ${ }^{3}$ Compared to infants born at term preterm infants are more likely to suffer lifelong neurologic, cognitive and behavioral problems. ${ }^{4.5}$ Preterm births and low birth weight are often, but not always, associated. The United States preterm birth rate in 2019 rose for the fifth straight year to $10.2 \%$, while the low birth weight rate remained unchanged (8.3\% in 2019). ${ }^{6}$ Preterm births cost the U.S. health care system more than $\$ 25.2$ billion each year.?

## Findings

- Preterm births accounted for $8.1 \%$ of the 34,963 births to Orange County residents in 2019. This percentage represents an $11 \%$ decrease from 2010 ( $9.1 \%$ ). By comparison, the rate for the United States was higher at $10.2 \%$ as was the rate for California (9.0\%). ${ }^{8}$
- The percentage of preterm births in Orange County was highest among Black infants (12.1\%), followed by Hispanic (9.5\%), White (7.5\%) and Asian (6.6\%) infants. The percentages increased for all races and ethnicities compared to 2018.
- Mothers under the age of 15 and over the age of 40 had the highest rate of preterm births at $14.3 \%$ and $13.2 \%$, respectively. Mothers ages 25-29 had the lowest rate at $6.5 \%$.

# TEEN BIRTHS 

## TEEN BIRTH RATES DROP IN ORANGE COUNTY FOR ALL RACES AND ETHNICITIES.

#### Abstract

DESCRIPTION OF INDICATOR This indicator reports the percent of total annual births occurring among females ages 19 years and younger and the teen birth rate, which is a calculation of annual teen births per 1,000 females ages 15 to 19 years per year.

## Why is this indicator important?

Giving birth as a teen can have profoundly negative consequences for both the teen and the infant. Teen births also have negative consequences for society. Teens who give birth are less likely to complete high school or college. ${ }^{1}$ They are more likely to require public assistance and live in poverty than their non-parenting peers. ${ }^{2}$ Infants born to teens are at greater risk for low birth weight, preterm birth and death in infancy. These infants have a lower probability of obtaining the emotional and financial resources they need throughout childhood to develop into independent, productive, well-adjusted adults. ${ }^{3}$ Teen birth rates have declined significantly since 1991, representing an estimated annual U.S. taxpayer savings of $\$ 4.4$ billion in 2015 alone. ${ }^{4}$ However, teen births still cost taxpayers an estimated $\$ 1.9$ billion in 2015. For California, the estimated taxpayer costs were $\$ 159$ million in 2015 and for Orange County, $\$ 8.96$ million in 2015 (societal costs are estimated to be even higher).

## Findings

- In 2019, 2.4\% (847) of all Orange County births were to teen females ages 19 years and younger, a $64 \%$ decrease from $6.6 \%(2,515)$ in 2010. Overall, total births decreased $8.6 \%$ from 38,237 in 2010 to 34,963 births in 2019.
- The teen birth rate in Orange County in 2019 was 7.5 births per 1,000 females ages 15 to 19 , a decrease of $67 \%$ from 22.7 births per 1,000 in 2010.
- At 7.5 births per 1,000 teen females, Orange County has a lower teen birth rate than California (12.4) ${ }^{5}$ and the United States (16.7) ${ }^{6}$.
- When assessed by race/ethnicity, Hispanic teens had the highest birth rate (14.7 births per 1,000 teen females), followed by Black (7.1), White (1.9) and Asian (0.5) teens in Orange County.
- Teen birth rates in Orange County have declined for all races and ethnicities, with Hispanic teens experiencing the most dramatic drop ( $68 \%$ in 10 years).

## BREASTFEEDING

# THE PERCENTAGE OF MOTHERS CONTINUING EXCLUSIVE BREASTFEEDING THREE MONTHS AFTER DELIVERY CONTINUES TO INCREASE TO A FIVE YEAR HIGH OF 38.8\%. 

## DESCRIPTION OF INDICATOR

#### Abstract

This indicator reports the prevalence of breastfeeding using two California Department of Public Health data sources. The In-Hospital Newborn Screening Program documents feeding practices at the time of hospital discharge. The Maternal Infant Health Assessment (MIHA) is an annual statewide-representative survey of women with a recent live birth in California. In-Hospital Newborn Screening data are presented as the percent of mothers breastfeeding in the hospital after birth; MIHA data are presented as the percent of mothers who reported breastfeeding at one month after delivery and at three months after delivery.

## Why is this indicator important?

Human milk is the optimal source of nutrition and provides many benefits for healthy infant growth and development. Breastfeeding significantly reduces infant risks for infections, asthma or allergies compared to infants who are formula fed, resulting in fewer hospitalizations and trips to the doctor. ${ }^{1}$ Evidence also demonstrates that breastfeeding reduces the risk for cardiovascular disease, asthma and diabetes later in life and can reduce the risk of childhood obesity. ${ }^{2}$ These benefits increase greatly when a mother exclusively breastfeeds for the first six months of life.

Breastfeeding can provide protective health benefits for the mother who breastfeeds frequently enough for a sufficient duration. The breastfeeding mother may experience less postpartum bleeding (which conserves iron in the body), less risk for post-menopausal osteoporosis and hip fracture, an earlier return to pre-pregnancy weight and decreased risks of breast and ovarian cancers.

Breastfeeding also benefits the entire family and community. It improves household food security because families need not use income to buy formula, food and bottles. Health care related expenses decrease because breastfeeding protects the infant and mother.

## Findings

- In 2019, 66.0\% of Orange County women were exclusively breastfeeding at time of hospital discharge, lower than California at 70.0\% of women. ${ }^{3}$
- Exclusive breastfeeding at time of discharge was highest among White women at $82.1 \%$, followed by multiracial (79.9\%), Black (69.5\%), Hispanic (63.5\%), Pacific Islander (56.3\%) and Asian (52.1\%) women.
- In 2018/19, 58.9\% of Orange County women surveyed by MIHA were exclusively breastfeeding one week after delivery, a 14.6\% increase since 2014/15 and slightly higher than women in California at $58.5 \%$.
- One month after delivery, $46.5 \%$ of Orange County women surveyed by MIHA in 2018/19 were exclusively breastfeeding, a $9 \%$ increase since 2014/15 and slightly higher than women in California at 46.2\%.
- Three months after delivery, 38.8\% of Orange County women surveyed by MIHA in 2018/19 were exclusively breastfeeding, a $21.3 \%$ increase since 2014/15 and higher than women in California 33.8\%.

Note: Indicators for breastfeeding at three months postpartum are limited to women whose infant was at least three months old at the time of survey completion. Note: MIHA is an annual population-based survey of California resident women with a live birth. Data from MIHA 2017-2018 were combined, resulting in a statewide sample size of 12,561 . The sample size of Orange County was 510 . MIHA participants were sampled from the California Automated Vital Statistics System. Prevalence (\%), $95 \%$ confidence interval ( $95 \% \mathrm{CI}$ ), and population estimates (rounded to the nearest hundred) are weighted to represent all women with a live birth. Population estimate $(\mathrm{N})$ is a two-year average. Indicators for breastfeeding at 3 months postpartum are limited to women whose infant was at least 3 months old at the time of survey completion. Data were prepared by the California Department of Public Health; Center for Family Health; Maternal, Child and Adolescent Health Program; Epidemiology, Surveillance and Federal Reporting Branch. See the Technical Notes for information on weighting, comparability to prior years and technical definitions. Visit the MIHA website at www.cdph.ca.gov/MIHA.

# IMMUNIZATIONS FOR CHILDREN ENTERING KINDERGARTEN REMAIN STEADY AROUND 95\%. 

## DESCRIPTION OF INDICATOR

This indicator reports the percent of children who received all of the doses of specific vaccines recommended for attending child care facilities and required at kindergarten entry. Child care facilities include any private or public child care center, day nursery, nursery school, family day care home or development center. ${ }^{1}$

## Why is this indicator important?

The widespread use of safe, effective childhood vaccinations has been one of the most successful and cost-effective public health interventions in the U.S. and globally. Many serious and once-common childhood infections have been dramatically reduced through routine immunizations. The success of immunization programs depends upon appropriate timing and on a high rate of vaccine acceptance, particularly among parents of young children.
Over the past decade, increasing numbers of children with delayed or refused vaccinations have led to reduced levels of vaccine coverage. Studies have found that children whose parents delay or refuse vaccines are more likely to be White and reside in well-educated, higher income areas. ${ }^{2}$ On the population level, success depends on a community achieving a threshold level of immunity, and many communities are below the protective level needed to prevent the spread of disease. ${ }^{3}$

## Findings

- In 2020, 95.4\% of Orange County children in child care centers had been adequately immunized (4:3:1 schedule) at their time of enrollment, higher than the low of $87.6 \%$ in $2013 .{ }^{4}$
- In 2020, $94.7 \%$ of Orange County kindergartners had up-to-date immunizations, a $6.8 \%$ increase from the 10-year low of $88.7 \%$ in 2013 but lower than a high of $95.7 \%$ in 2018.
- These percentages and trends are similar to those among kindergartners throughout California, who were immunized at a rate of 94.8\% in $2018 .{ }^{5}$
- Savanna School District had the lowest percentage of kindergartners with up-to-date immunization levels at $85.2 \%$ in 2020, followed by Santa Ana Unified School District (87.5\%). Westminster School District has the highest percentage at $98.9 \%$.

# ONE IN FOUR ECONOMICALLY DISADVANTAGED STUDENTS EXPERIENCE RISK OF OBESITY COMPARED TO ONE IN 10 ECONOMICALLY ADVANTAGED STUDENTS. 

DESCRIPTION OF INDICATOR
This indicator reports data from the California Physical Fitness Test on the percent of 5th grade students who are classified as having health risk due to their body composition.

## Why is this indicator important?

Excess weight acquired during childhood and adolescence may persist into adulthood and increase the risk for chronic diseases, such as sleep apnea, diabetes, cardiovascular disease and hypertension. Obese adolescents have a 70\% chance of becoming obese adults. ${ }^{1}$ Excess weight can be prevented and treated through proper nutrition and physical activity (reported on page 32-33 of this report), especially during the critical periods of infancy, two to four years of age and adolescence.

## Findings

- During the $2018 / 19$ school year, $18.3 \%(6,444)$ of Orange County 5th graders tested were classified as obese. This rate has remained steady since 2013/14 at approximately $18 \%$ and is lower than California at 21.9\% of 5th graders.
- In 2018/19, Hispanic/Latino and Pacific Islander students had the highest rates of being at
health risk due to their body composition (27.2\% and $27.0 \%$, respectively). Asian and White 5th graders had the lowest rate of being at health risk due to their body composition (7.9\% and 8.5\%, respectively).
- When comparing the likelihood of one group to another, Hispanic/Latino students were 195\% more likely to be at health risk and Pacific Islander students were $48 \%$ more likely to be at health risk than non-Hispanic/Latino and non-Pacific Islander 5th graders, respectively.
- It is important to note that there are many social and environmental factors that influence where children fall on the Equity Ratio's likelihood scale.
- Among 5th grade students who are not economically disadvantaged, one in 10 (10.2\%) were classified at health risk due to their body composition, compared with one in four (25.7\%) students who are economically disadvantaged.

[^2]Percent of 5th Grade Students Classified at Health Risk Due to Body Composition, by Race/Ethnicity, 2018/19

- Percent Classified at Risk within each Race/Ethnicity
- Likelihood of Health Risk as compared to other Races/Ethnicities

Note: Black, Filipino, American Indian, and Pacific Islander 5th grade student enrollment is less than $4.5 \%$ of all 5 th grade student enrollment. Percent at risk for these groups may be unstable and should be interpreted with caution.
Note: The Equity Ratio offers a comparison of one race/ethnicity group compared to all the other groups regarding the likelihood of being at health risk due to their aerobic capacity. To learn more about the Equity Ratio, see page 8.

# PHYSICAL FITNESS AND NUTRITION 

## ONE IN 14 5TH GRADERS ARE AT HEALTH RISK DUE TO POOR PHYSICAL FITNESS.

## DESCRIPTION OF INDICATOR

To assess physical fitness, this indicator reports data from the California Physical Fitness Test on the percent of 5th grade students who are classified as having health risk due to their aerobic capacity. For nutrition, this indicator reports the proportion of youth (ages two to 17) who consumed one soda the previous day and ate more than five servings of fruits/ vegetables daily.

## Why is this indicator important?

Both physical fitness and nutrition are essential to achieving and keeping a healthy weight. ${ }^{1}$ The habitual intake of too many calories, including the consumption of sugary beverages, without enough physical fitness, can result in obesity. Those who eat a nutritious diet rich in fruits and vegetables and/or incorporate aerobic physical activity and cardiorespiratory fitness into a daily routine are less likely to develop many types of disease, including heart disease, high blood pressure, Type 2 diabetes, and oral disease. ${ }^{2,3}$ Additionally, these behaviors, when developed at a younger age, are associated with similar behaviors in adulthood. ${ }^{4}$

## Findings

- During the 2018/19 school year, $6.4 \%(2,254)$ of 5th graders tested were classified "at health risk due to aerobic capacity," up 10.3\% since 2013/2014 (5.8\% or 2,113), but lower than California at $7.2 \%$ of 5 th graders. ${ }^{5}$
- Among 5th graders, Pacific Islander and Hispanic/Latino students had the highest rates of being at health risk due to their aerobic
capacity ( $10.3 \%$ and $9.7 \%$, respectively). Asian and White 5th graders had the lowest rate of being at health risk due to their aerobic capacity ( $1.8 \%$ and $2.9 \%$, respectively).
- When comparing the likelihood of one group to another, Hispanic/Latino students were 220\% more likely and Pacific Islander students were 61\% more likely to be at health risk due to their aerobic capacity than non-Hispanic/Latino and non-Pacific Islander 5th graders, respectively.
- It is important to note that there are many social and environmental factors that influence where children fall on the equity ratio's likelihood scale.
- According to the 2020 California Health Interview Survey:
- 19.8\% of children (two to 17 years old) reported drinking one glass of soda during the previous day, a decrease of $29.3 \%$ from 28.0\% in 2013.
- $21.4 \%$ of teenagers ( 12 to 17 years old) reported eating five or more servings of fruits and vegetables daily, an increase of $8.1 \%$ from 19.8\% in 2011.

## BEHAVIORAL HEALTH

## JUST OVER ONE IN THREE $11^{\text {TH }}$ GRADERS REPORT CHRONIC SADNESS

#### Abstract

DESCRIPTION OF INDICATOR This indicator presents the behavioral health of Orange County children using data from the Early Development Index (EDI), California Healthy Kids Survey, California Health Interview Survey and inpatient hospitalizations. It reports on five areas representing the continuum of behavioral health need from early childhood to adolescence. It tracks kindergarten readiness data on social competence and emotional maturity, percentage of youth experiencing chronic sadness or hopeless feelings, percentage of youth receiving psychological and emotional counseling, percentage of youth who seriously considered attempting suicide and the number and rate of inpatient hospitalizations in Orange County related to behavioral health conditions.

## Why is this indicator important?

Behavioral health, including mental health and substance use, is as important as physical health. ${ }^{1}$ Mental health and substance use disorders are chronic health conditions that last a long time. Without early diagnosis and treatment, children with poor behavioral health can have problems at home, in school and in forming friendships. It can also interfere with a child's healthy development, causing problems that can continue into adulthood. ${ }^{2}$

## Findings

- In 2019, 13.7\% and $11.3 \%$ of Black and Hispanic/Latino kindergartners, respectively, were vulnerable on the EDI's social-emotional composite. When comparing the likelihood of one group to another, Black students were 42\% and Hispanic/Latino students were 40\% more likely to be vulnerable compared to nonBlack and non-Hispanic/Latino kindergartners, respectively. ${ }^{3}$
- In 2017-2019, 34.6\% of 11 th graders experienced depression related feelings in the previous year, compared to 9 th graders ( $30.2 \%$ ) and 7th graders ( $24.6 \%$ ). Overall, Orange County rates are lower than California at $36.5 \%, 32.6 \%$ and $30.4 \%$, respectively, and are up compared to 2011-2013. ${ }^{4}$
- Students are more likely to experience chronic sadness or hopeless feelings compared to 2011-2013, increasing 13.4\% for 11th graders, 7.9\% for 7th graders and $4.2 \%$ for 9 th graders.
- Students who identified as gay, lesbian, or bisexual were more than twice as likely to report depression related feelings than their heterosexual classmates ( $63.5 \%$ to $27.0 \%$ ).
- In 2019, 12.3\% of youth ages 12 to 17 years old reported receiving psychological/emotional counseling in the past year, and this percentage has remained stable since 2016.
- In 2017-2019, an estimated $15 \%$ of 9 th and 11 th graders seriously considered attempting suicide in the previous year, lower than California's estimated $16 \%$, and a decrease from an estimated 17\% in 2011-2013.
- The combined hospitalization rate for serious mental illness and substance abuse conditions for children has increased by $88 \%$, from a low of 18.7 in 2010 to 35.1 per 10,000 children in 2019. The increase in hospitalizations may be due to multiple factors including, but not limited to, increased capacity and access to these services as well as decreased stigma around help-seeking.

# POVERTY AMONG CHILDREN DECREASED 19.3\% FROM THE 10-YEAR HIGH IN 2014/15. 

## DESCRIPTION OF INDICATOR

This indicator reports the number and percent of students eligible for the National School Free and Reduced Price Lunch program, considered to be an indicator of children living in poverty or of working poor families. Eligibility is based on income of the child's parent(s) or guardian(s), which must be below $185 \%$ of the Federal Poverty Level. This indicator also tracks the percent of children living in poverty according to the U.S. Census Bureau.

Why is this indicator important?
Research has demonstrated that living in poverty has a wide range of negative effects on the physical and mental health and well-being of children. Poverty is linked with negative conditions such as substandard housing, homelessness, inadequate nutrition, food insecurity, inadequate child care, lack of access to health care, unsafe neighborhoods and under-resourced schools. ${ }^{1}$ These conditions mean school districts face many challenges serving low-income families, particularly those school districts with more than $75 \%$ of students enrolled in the Free and Reduced Price Lunch program. ${ }^{2}$ The implications for children living in poverty include greater risk for poor academic achievement, school dropout, abuse and neglect, behavioral and social/ emotional problems, physical health problems and developmental delays.

## Findings

- In 2020/21 (2021), 49.6\% (222,111) of students were eligible for the Free and Reduced Price Lunch program in Orange County, lower than California at $59.4 \%(3,646,577)$.
- Between 2012 and 2021, there was an increase (6.9\%) among Orange County students eligible for the Free and Reduced Price Lunch program, more so than among students throughout California (3.3\%).
- According to the U.S. Census Bureau, 14.2\% of Orange County's children were living in poverty in 2019; a 19.3\% decrease from the 10-year high of $17.6 \%$ (2014 \& 2015). The rate also remains lower than California (18.1\%) and the United States (18.5\%).
- When cost of living and a range of family needs and resources, including social safety net benefits, are factored in, poverty among Orange County's children jumps to $24.1 \%$, surpassing California at $18.8 \%$, with a threshold income needed to maintain a basic standard of living for a family of four at $\$ 36,846$ in 2018 . $^{3}$

## CALWORKS

## CHILDREN RECEIVING CALWORKS CONTINUES STEADY DECLINE IN 2019/20, DOWN 5\% FROM THE PRIOR YEAR.

## DESCRIPTION OF INDICATOR

This indicator reports the average number and percent of children per month under the age of 18 years receiving financial assistance through California Work Opportunity and Responsibility to Kids (CalWORKs). The decline in the percentage of children receiving CalWORKs benefits is likely attributed to a variety of factors, such as a long-term downward trend in the number of children under 18 residing in Orange County, improvement in the economy prior to the pandemic and the new federal and state COVID-19 economic relief resources available to Orange County.

Why is this indicator important?
The percent of children benefiting from CalWORKs is an indicator of Orange County's capacity to help families struggling to make ends meet and at the same time, responsibly care for their children. This indicator also reflects a widespread need for financial support among families in need across Orange County as CalWORKs beneficiaries receive financial and employment assistance. The goals of the CalWORKs program include reduced welfare dependency, increased self-sufficiency and improved child well-being by encouraging parental responsibility through school attendance, child immunization requirements and assisting with paternity and child support enforcement activities.

Findings

- In 2019/2020, 3.5\% (25,098) of Orange County's children received CalWORKs assistance, a $46.0 \%$ decrease from $5.9 \%(46,809)$ of children in 2010/11.
- Since 2011/12, the proportion of children receiving CalWORKs has been steadily declining, mirroring a nationwide trend.
- Young children ( $0-5$ years of age) accounted for $26.4 \%$ of the youth population receiving CalWORKs assistance.
- The cities with the highest percentages of children receiving CalWORKs were Santa Ana at $6.8 \%(6,123)$, Anaheim at $6.4 \%(5,357)$, Garden Grove at $5.2 \% ~(1,922)$, Buena Park at $5.1 \%$ (927) and Stanton at 5.1\% (497).
- Cities with the lowest percentage of children receiving CalWORKs included Villa Park at $0.3 \%$ (3), Rancho Santa Margarita at 0.5\% (61), Newport Beach at 0.6\% (82), Aliso Viejo at 0.6\% (78), Laguna Beach at 0.7\% (25), Yorba Linda at $0.7 \%$ (117) and Seal Beach at $1.0 \%$ (31).

[^4]

## SUPPLEMENTAL

## PERCENTAGE OF CHILDREN RECEIVING CALFRESH CONTINUES ITS FIVE YEAR DECLINE.

## DESCRIPTION OF INDICATOR

This indicator reports the number and percent of recipients of the CalFresh Program, federally known as the Supplemental Nutrition Assistance Program (SNAP) and the number and percent of recipients in the Supplemental Nutrition Program for Women, Infants and Children (WIC). ${ }^{1}$ As an indicator of poverty, an increase in children receiving these benefits is one that needs improvement. However, an increase may also be viewed as an improvement because more eligible children are receiving these benefits.

## Why is this indicator important?

Data shows that there is a relationship between a family's food security and assurance of a healthy life. Households with food insecurity are more likely to experience reduced diet quality, anxiety about their food supply, increased use of emergency food sources or other coping behaviors and hunger. CalFresh and WIC programs provide nutrition assistance to people in low-income households by increasing their food buying power so they are able to purchase more nutritious foods, such as fruits, vegetables and other healthy foods. Income eligible children can receive both forms of nutrition assistance.

## Findings

- In 2019/20, 12.5\% $(90,263)$ of children under 18 years old received CalFresh, a $37.3 \%$ decrease in the percentage of children from the 10-year high of $19.9 \%$ in $2014 / 15$. Orange County had a lower rate than California at $20.4 \%(1,810,547)$ of children receiving CalFresh. ${ }^{2}$
- In January 2021, the greatest proportion of CalFresh beneficiaries under 18 in Orange County were children aged six to 12 years old ( $42.4 \%$ or 37,746 ), followed by 13 to 17 years old $(29.3 \%$ or 26,090$)$ and zero to five years old (28.3\% or 25,241 ).
- It is estimated that $59.2 \%$ of people in Orange County who are eligible for CalFresh are receiving that benefit, less than California at $71.4 \%{ }^{3}$
- 2019/20, 52,955 participants were served by the WIC program, a decrease of $48.9 \%$ from 100,563 in 2010/11.
- In the average month of $2018,56.9 \%$ of women and children eligible for WIC were receiving that benefit nationally, lower than California at $67.1 \% .{ }^{4}$ Both rates have dropped from a high in 2011, when the national rate was $63.5 \%$ and California rate was 82.5\%.

## HOUSING

## ABOUT ONE IN 10 INSECURELY HOUSED STUDENTS LIVE IN SHELTERS, HOTELS OR MOTELS OR ARE UNSHELTERED.

## DESCRIPTION OF INDICATOR

This indicator reports the number of insecurely housed students identified by school districts as homeless, meaning they are living unsheltered or in motels, shelters, parks and doubling- or tripling-up in a home, as defined by the McKinney-Vento Homeless Education Assistance Act.

## Why is this indicator important?

The high mobility, trauma and poverty associated with homelessness and insecure housing create educational barriers, low school attendance, developmental, physical and emotional problems for students. Lacking a fixed, regular nighttime stay increases the chances that a student will require additional support services associated with their developmental and academic success. A homeless student or one living in a crowded environment may experience a greater tendency for stress and anxiety not knowing where they are going to sleep each night nor having a consistent, quiet, permanent place to study or do their homework. Lack of secure housing may be associated with lower standardized test scores in all areas.

## Findings

- In 2018/19, 6.8\% $(29,840)$ of students in Orange County experienced insecure housing, which is $55.0 \%$ greater than in 2009/10 at 4.4\% (26,029). ${ }^{1}$
- With regard to primary nighttime residence, in 2018/19:
- $89.1 \%(26,600)$ of insecurely housed students were doubled or tripled-up in housing.
- $4.6 \%(1,380)$ of insecurely housed students were in hotels or motels.
- $4.7 \%(1,403)$ of insecurely housed students were housed in shelters.
- 1.5\% (457) of insecurely housed students were unsheltered. ${ }^{2}$
- Of those students with insecure housing in 2018/19, elementary age students (pre K-5th) represent the highest percentage at $43.2 \%$, followed by high school age students (grades $9-12$ ) at $33.4 \%$ and middle school students (grades 6-8) at 23.4\%.

## CHILD

# CHILD SUPPORT COLLECTIONS AND SUPPORT DISTRIBUTION TO FAMILIES RETURN TO PRE-PANDEMIC LEVELS. 

## DESCRIPTION OF INDICATOR

#### Abstract

This indicator reports the Distributed Net Collections divided by the average monthly caseload for the Federal Fiscal Year. Improvements in collections per case reflects an increase in income to parents to provide for the basic needs of their children.

## Why is this indicator important?

While the number of Orange County children living in poverty has decreased in recent years, 98,578 remain below the poverty line. ${ }^{1}$ Research shows that child support payments help to lift more than one million Americans above the poverty line each year and assist families with incomes above the poverty line to make ends meet. ${ }^{2}$ Child Support Services (CSS) builds partnerships with parents, develops community linkages and cultivates existing relationships with other county agencies. Expected results are increased collections and improved performance, which yield increased financial support to meet the needs of children and families. Child support collections pay for essentials such as food, shelter, child care and medical support. CSS has implemented a family-centered approach that connects customers to local resources for family essentials (e.g., clothing and food), parental success le.g., parenting classes and financial workshops) and individual services (e.g., adult education and job training). In the last 10 years, the number of Orange County CSS cases has decreased while services to customers have increased, along with the collections per case.

## Findings

- Total Orange County child support cases decreased by 23.6\% from 77,582 in 2011/12 to 59,271 in 2020/21.
- Over the same period, net collections increased by $12.2 \%$ from $\$ 180.1$ million in 2011/12 to $\$ 189.1$ million in 2020/21, with an average of $\$ 184$ million annually. Collections decreased $5 \%$ from 2019/20 (\$199.1 million to \$189.1), reflecting a return to pre-pandemic levels. The 2019/20 collections were higher than normal as a result of intercepted pandemic related stimulus payments and benefits.
- Most (93.8\%) Orange County cases have a court order established, in comparison to California's rate of $92.1 \%$. Since 2009/10, the Orange County CSS rate has increased 23.3\% (from 76.1\%). ${ }^{3}$
- The percent of current support distributed among Orange County cases during 2020/21 was $67.5 \%$, which is higher than the California rate of $66.4 \%$ and represents a $7.7 \%$ increase from 2011/12 when the rate was $62.7 \%{ }^{4}$

# KINDERGARTEN READINESS 

## HALF OF CHILDREN ENTERING KINDERGARTEN ARE CONSIDERED DEVELOPMENTALLY READY.

## DESCRIPTION OF INDICATOR

Orange County uses the Early Development Index (EDI) to measure children's readiness for school. The EDI - conducted during the kindergarten year - assesses children's development by using a questionnaire filled out by kindergarten teachers for every child in their class. It tracks five areas of a child's development: language and cognitive development; communication skills and general knowledge; social competence; emotional maturity; and physical health and well-being. In 2015, comprehensive EDI data was available for children enrolled in public school for the first time in Orange County and thus serves as a baseline to measure changes in incoming kindergarten class readiness over time.

Why is this indicator important?
Long-term, a child's academic success is heavily dependent upon their readiness for kindergarten. Children who enter school with early skills, such as basic knowledge of math and reading concepts as well as communication, language, social competence and emotional maturity, are more likely than their peers without such skills to experience later academic success, attain higher levels of education and secure employment. ${ }^{1}$ Factors that influence kindergarten readiness include family and community supports and environments, as well as children's early development opportunities and experiences. The EDI is one way to assess how well communities are preparing its children for school.

## Findings

- In 2019, 52.9\% of children in Orange County were developmentally ready for kindergarten, a $1.9 \%$ increase from 2015 at 51.9\%. Children are considered developmentally ready for school if they are on track in all five areas assessed (or in all four areas if only four areas were assessed).
- Among kindergartners, the areas of greatest vulnerabilities are language and cognitive development ( $27 \%$ vulnerable or at-risk) and communication skills and general knowledge ( $26 \%$ vulnerable or at-risk). Smaller percentages of children are vulnerable or at risk in social competence ( $22 \%$ ), physical health and well-being ( $20 \%$ ) and emotional maturity ( $20 \%$ ).
- In 2019, Hispanic/Latino and African American/ Black students had the lowest rate of being assessed as ready for kindergarten (44.5\% and $48.7 \%$, respectively). Asian and White students had the highest rate of being assessed as ready for kindergarten $(63.9 \%$ and $60.8 \%$, respectively).
- When comparing the likelihood of one group to another, Hispanic/Latino children were 27\% less likely and African-American/Black children were $8 \%$ less likely to be assessed as ready for kindergarten than non-Hispanic/Latino and non-African American/Black kindergartners, respectively.
- It is important to note that there are many social and environmental factors that influence where children fall on the Equity Ratio's likelihood scale.

## EDUCATION

Percent of Children with Kindergarten
Readiness, by Race/Ethnicity, 2019

- Kindergarten Readiness within each Race/Ethnicity
- Likelihood of Being Kindergarten Ready compared to other Races/Ethnicities

Note: Third grade student enrollment by race/ethnicity is $50.5 \%$ Hispanic or Latino, 24.1\% White, 16.1\% Asian, 4.7\% Multiracial, 1.8\% Filipino, 1.2\% African American, $0.3 \%$ Pacific Islander, 0.2\% American Indian or Alaska Native and 1\% Not Reported. Black/African American, Filipino, American Indian/Alaska Native and Native Hawaiian or Pacific Islander third grade student enrollment is less than $2 \%$ of all 3 rd grade student enrollment.
Note: The Equity Ratio offers a comparison of one race/ethnicity group compared to all the other groups regarding the likelihood of being at health risk due to their aerobic capacity. To learn more about the Equity Ratio, see page 8.

# THIRD GRADE ENGLISH LANGUAGE ARTS 

# THIRD GRADE STUDENTS SHOW GREATEST IMPROVEMENT IN READING AND LISTENING. 

#### Abstract

DESCRIPTION OF INDICATOR This indicator presents the California Assessment of Student Performance and Progress (CAASPP) data for student academic performance in English Language Arts and Literacy (ELA). Starting in 2014/15 (2015), CAASPP reflects the Common Core State Standards and online testing system to measure the academic performance of students. This indicator reports on third grade students.

## Why is this indicator important?

CAASPP is designed to demonstrate progress towards learning problem-solving and critical thinking skills needed for college and career readiness. It gives schools and communities data on the performance of students and significant student groups within a school. This information helps schools analyze academic progress and if resource re-allocation is needed to ensure all students succeed. ELA assesses a student's performance in reading, writing, listening and research. Understanding performance at the completion of third grade is important because third grade is the year that the focus of reading instruction shifts from learning to read, to reading to learn. Third-graders who lack proficiency in reading are four times more likely to become high school dropouts. ${ }^{1}$

## Findings

- In 2019, over half (56\%) of Orange County third grade students met or exceeded the statewide achievement standard for ELA, a $22 \%$ increase from 2015 (46\%) and higher than California at 49\%.
- Among third grade students who are not economically disadvantaged, $74 \%$ met or exceeded the achievement standards in ELA, substantially higher than those students who are economically disadvantaged at 39\%.
- The percentage of economically disadvantaged students who met or exceeded standards increased by $57 \%$ compared to a $9 \%$ increase among students who were not economically disadvantaged.
- The ELA assessments are subdivided by four academic focus areas. Thirty-three percent of third graders were above standards in the area of Reading, followed by $29 \%$ in Research/ Inquiry, $27 \%$ in Writing and $26 \%$ in Listening, and increased across all areas since 2015: listening ( $46 \%$ increase), followed by reading ( $43 \%$ increase), research/inquiry ( $28 \%$ increase) and writing (17\% increase).
- Among third graders, Hispanic/Latino and American Indian/Native American students had the lowest rates of meeting or exceeding ELA standards ( $39 \%$ and $41 \%$, respectively). On the other hand, Asian and Multiracial third graders had the highest rates of meeting or exceeding ELA standards ( $80 \%$ and $77 \%$, respectively).
- When comparing the likelihood of one group to another, Hispanic/Latinos were 47\% less likely and American Indian/Native Americans were 28\% less likely to meet or exceed ELA standards compared to non-Hispanic/Latino or nonAmerican Indian/Native American third graders, respectively, per the Equity Ratio.
- It is important to note that there are many social and environmental factors that influence where children fall on the Equity Ratio's likelihood scale.

## EDUCATION

Overall Achievement in ELA Among Third Grade Students, by Socioeconomic Status, 2015 and 2019

Economically Disadvantaged Not Economically Disadvantaged

Note: A student is defined as "economically disadvantaged" if the most educated parent of the student, as indicated in CALPADS, has not received a high school diploma or the student is eligible to participate in free or reduced-price lunch program also known as the National School Lunch Program.

Achievement in ELA Focus Areas Among Third Grade Students, 2019

Note: ELA results include information about the students' performance in the areas of reading, writing, listening and research. The student's performance in these key areas for each subject are reported using the following three indicators: below standard, at or near standard and above standard.
Source: CAASPP, 2018/19 (2019)

Overall Achievement in ELA Among Third Grade Students, by Race/Ethnicity, 2019

- Standard Exceeded/Met within each Race/Ethnicity
- Likelihood of Exceeding/Meeting the Standards compared to other Races/Ethnicities

Note: Third grade student enrollment by race/ethnicity is $50.5 \%$ Hispanic or Latino, 24.1\% White, 16.1\% Asian, 4.7\% Multiracial, 1.8\% Filipino, 1.2\% African American, 0.3\% Pacific Islander, 0.2\% American Indian or Alaska Native and 1\% Not Reported. Black/African American, Filipino, American Indian/Alaska Native and Native Hawaiian or Pacific Islander third grade student enrollment is less than $2 \%$ of all 3 rd grade student enrollment.
Note: The Equity Ratio offers a comparison of one race/ethnicity group compared to all the other groups regarding the likelihood of being at health risk due to their aerobic capacity. To learn more about the Equity Ratio, see page 8. Source: CAASPP, 2018/19 (2019)

Percent of Third Grade Students Who Exceeded or Met Standards for ELA Overall Achievement, by School District, 2019

# THIRD GRADE MATHEMATICS 

## ECONOMICALLY DISADVANTAGED STUDENTS SHOW GREATEST IMPROVEMENT IN MATH, WHILE DISPARITY PERSISTS.

## DESCRIPTION OF INDICATOR

#### Abstract

This indicator presents the new California Assessment of Student Performance and Progress (CAASPP) data for student academic performance in mathematics. Starting in 2014/15 (2015), CAASPP reflects the Common Core State Standards and online testing system to measure the academic performance of students.

## Why is this indicator important?

CAASPP is designed to demonstrate progress towards learning problem-solving and criticalthinking skills needed for college and a career. It gives schools and communities data on the performance of all students and significant subgroups within a school. This information helps schools analyze their academic progress and if resource reallocation is needed to ensure all students succeed. The mathematics component assesses a student's performance in applying mathematical concepts and procedures, using appropriate tools and strategies to solve problems and demonstrating ability to support mathematical conclusions. It is known that math difficulties are cumulative and worsen with time. ${ }^{1}$ Understanding third grade performance is important because it is the year that students start utilizing the decimal system to do multi-digit number calculations, an important foundation for future success in mathematics.

## Findings

- In 2019, over half (59\%) of Orange County third grade students met or exceeded the statewide achievement standard in math, a $16 \%$ increase from 2015 ( $51 \%$ ) and higher than California at $50 \%$.
- Among third grade students who are not economically disadvantaged, $76 \%$ met or exceeded the achievement standards in math, substantially higher than those students who are economically disadvantaged at 42\%.
- Among third graders, Hispanic/Latino and American Indian/Native American students had the lowest rates of meeting or exceeding Math standards ( $41 \%$ and $42 \%$, respectively). On the other hand, Asian and Multiracial third graders had the highest rates of meeting or exceeding Math standards ( $86 \%$ and $78 \%$, respectively).
- When comparing the likelihood of one group to another, Hispanic/Latinos were 47\% less likely to meet or exceed and American Indian/Native Americans were $28 \%$ less likely to exceed or meet standards compared to non-Hispanic/ Latino or non-American Indian/Native American third graders, respectively, per the Equity Ratio.
- It is important to note that there are many social and environmental factors that influence where children fall on the Equity Ratio's likelihood scale.

Percent of Third Grade Students Who Exceeded or Met Standards for Mathematics Overall Achievement, by School District, 2019

# HIGH SCHOOL DROPOUT RATES 

## NEARLY ONE QUARTER OF FOSTER YOUTH STUDENTS DO NOT COMPLETE HIGH SCHOOL.

## DESCRIPTION OF INDICATOR

This indicator measures high school dropout rates for Orange County school districts, including detail by race/ethnicity and by program. Beginning in 2007/08 (2008), a student is considered a dropout if they were enrolled in grades 9 to 12 during the previous year and left before completing the current school year or did not attend the expected school or any other school by October of the following year. Students are not counted as dropouts if they received a diploma, General Education Diploma (GED) or California High School Proficiency Exam (CHSPE) certificate; are Special Education completers; transferred to a degreegranting college; passed away; had a school-recognized absence; or were known to have left the state. ${ }^{1}$

## Why is this indicator important?

Education provides benefits to both individuals and society. Compared to high school graduates, dropouts earn lower wages, resulting in lower tax contributions and more utilization of welfare programs. They are also at higher risk for criminal involvement and health problems. ${ }^{2}$

Findings

- The Orange County cohort dropout rate for 2020 was $5.0 \%$ and lower than the California 2020 dropout rate of $8.9 \%^{1}$ and the United States 2019 dropout rate for public schools of $5.1 \%{ }^{3}$
- In 2019, there were 40,243 cohort students of which 36,367 graduated and 2,004 students dropped out. The remaining 1,872 students did not graduate because they were either considered still enrolled at the time of the cohort's graduation (934 students), Special Education completers (410), CHSPE completers
(251) or completed the GED (25) or adult education diploma (17). 235 students were "other transfers."
- Dropout rates for the 2020 school year continued to be highest among African American students (8.2\%), followed by Hispanic or Latino ( $6.7 \%$ ), Multiracial ( $6.5 \%$ ), American Indian or Alaska Native (5.8\%), Pacific Islander ( $5.0 \%$ ), White ( $3.6 \%$ ), Asian (2.3\%) and Filipino (1.5\%) students.
- By program, dropout rates were highest among students enrolled as Foster Youth (22.7\%), followed by English Learners (12.1\%), Homeless Youth (10.7\%), Migrant Education (9.0\%), Students with Disabilities (8.1\%) and Socioeconomically Disadvantaged (6.9\%) students. ${ }^{4}$

# COLLEGE READINESS 

## MORE THAN HALF OF HIGH SCHOOL GRADUATES ARE COLLEGE-READY.

## DESCRIPTION OF INDICATOR

#### Abstract

This indicator tracks the number and percent of students who graduate from high school having completed the course requirements to be eligible to apply to a University of California (UC) or California State University (CSU). The UC/CSU eligibility requirements are presented below. ${ }^{1}$

## Why is this indicator important?

The UC/CSU minimum course requirements are centered on a well-rounded curriculum that fosters content mastery and ensures that students are ready to take college courses without remediation. Courses include an applied learning component to help students improve comprehension and practice critical thinking skills. The more students master the content in conjunction with these skills, the more likely they are to pursue and succeed in college, as well as in the workforce.

## Findings

- In 2019/20 (2020), Orange County had 36,367
high school graduates, of which $55.8 \%$ were UC/ CSU eligible, higher than California's eligibility rate of $50.9 \%$.
- At 78.4\%, Asian students had the greatest proportion of graduates who were UC/CSU eligible, followed by Filipino (69.2\%), Multiracial (62.4\%), White (62.1\%), American Indian or Alaska Native (50.5\%), Hispanic or Latino ( $42.5 \%$ ), Pacific Islander ( $41.4 \%$ ) and African American (41.3\%) graduates.
- Hispanic or Latino graduates comprise the largest group of total graduates ( $44.9 \%$ ), while only $42.5 \%$ of those were UC/CSU eligible. This percentage is lower than White $(28.4 \%$ of graduates, of which $62.1 \%$ were UC/CSU eligible) and Asian ( $17.4 \%$ of total graduates, of which $78.4 \%$ were UC/CSU eligible) graduates.
- By program, the UC/CSU eligibility rates were highest among students in the Socioeconomically Disadvantaged program ( $45.3 \%$ ), followed by students in the Migrant Education program (39.5\%) and English Learner program ( $25.0 \%$ ). ${ }^{2}$

UC/CSU Requirements

- 4 years of English
- 3 years of Math, including Algebra, Geometry, and Intermediate Algebra
- 2 years of History/Social Studies, including one year of U.S. History or one-half year of U.S. History and onehalf year of Civics or American Government; and one year of World History, Cultures, and Geography

# CHRONIC ABSENTEEISM 

## CHRONIC ABSENTEEISM IS HIGHEST AMONG FOSTER YOUTH.

## DESCRIPTION OF INDICATOR

This indicator tracks the number and percent of students who were absent for $10 \%$ or more of the enrolled instructional days, regardless of the reason (excused and unexcused absences). Chronic absenteeism is based on each school districts' days of enrollment, the expected days of attendance and the actual days attended. For most districts, this threshold is around 18 days in a school year or two days a month. Chronic absenteeism is associated with a number of negative consequences for students, including lower test scores, increased risk of dropping out and less access to health screenings and other support services. This indicator has been tracked by the California Department of Education since 2016/17 school year.

Why is this indicator important?
School attendance is an influential factor in academic achievement. Chronic absenteeism is associated with a number of negative consequences for students, including lower academic achievement and increased risk of dropping out due to the number of days missed. ${ }^{1}$ Achievement gaps in elementary, middle and high school levels are increased by chronic absenteeism. In particular, research has shown that chronic absenteeism in kindergarten is associated with lower achievement in reading and math in later grades, even when controlling for a child's socioeconomic status, kindergarten readiness and age entering kindergarten. ${ }^{2}$

## Findings

- In 2018/19, Orange County students including kindergarten through high school had a chronic absenteeism rate of $8.8 \%$. While this rate is an increase from 2016/17 (7.7\%), it remains lower than California at 12.1\%.
- In 2019, Pacific Islander and American Indian/ Alaska Native students had the highest rates of being chronically absent (15.9\% and 15.3\%,
respectively). At 3.2\% and 4.5\%, Asian and Filipino students, respectively, had the lowest rate of being chronically absent.
- When comparing the likelihood of one group to another, Native Hawaiian/Pacific Islander students were $82 \%$ more likely to be chronically absent than non-Native Hawaiian/Pacific Islander students per the Equity Ratio.
- It is important to note there are many social and environmental factors that influence where children fall on the equity ratio's likelihood scale.
- By program, chronic absenteeism rates were highest among students enrolled as Foster Youth (27.6\%), followed by Homeless Youth (18.2\%), Students with Disabilities (15.7\%), Socioeconomically Disadvantaged (11.6\%), Migrant Education (11.6\%) and English Learners (9.8\%) programs.
- High school students have the highest rates of chronic absenteeism (13.1\%), followed by kindergarten (11.7\%), middle school (7.1\%) and elementary school ( $6.4 \%$ ) students. This trend is similar to California.

GANG ACTIVITY AMONG YOUTH

# PREVENTABLE CHILD AND YOUTH DEATHS 

## DEATH BY UNINTENTIONAL INJURY AMONG YOUTH LOWER THAN 10 YEARS AGO.

## DESCRIPTION OF INDICATOR

This indicator reports the number of deaths from unintentional and intentional injuries, including suicide and homicide. Leading causes of death by age group are also identified.

## Why is this indicator important?

The death of every child is a tragedy for family and friends and a loss to the community. Along with the direct impact of a child's death, the child death rate in a community can be an important indicator for public health advocates and policymakers. A high rate can point to underlying problems such as violent neighborhoods or inadequate child supervision. ${ }^{1}$ Unintentional childhood mortality due to injury is strongly inversely related to median income and thus, a solid indicator of poverty. It can also point to health and social inequalities such as access to health care or safe places to play. ${ }^{2}$ Since children are much more likely to die during the first year of life (infancy) than they are at older ages, trends in infant mortality are discussed separately (page 18).

## Findings

- There were 77 deaths for children ages one to 19 years in Orange County in 2019. Overall, the child mortality rate was 10.4 child deaths per 100,000 children.
- Non-Hispanic White, Hispanic and Asian/Pacific Islander youth had lower mortality rates in 2019 when compared to 2018 (10.6 vs 19.6, 11.9 vs 15.0 , and 9.4 vs 17.3 per 100,000, respectively).
- The male mortality rate decreased $40.2 \%$ from 23.4 per 100,000 in 2018 to 14.0 per 100,000 in 2019. A decreasing trend was also seen among the female mortality rate declining $36.5 \%$ between 2018 and 2019 ( 10.4 vs 6.6 per 100,000).
- Over half (58.4\%) of all child and youth deaths were among the older teen age group lages 15 to 19).
- Orange County's overall injury death rate for children decreased $44.4 \%$ from a rate of 8.1 per 100,000 children ages one to 19 years in 2010 to 4.5 per 100,000 children in 2019, which is lower than California's rate of 10.4 in 2019.
- In 2019, the percentage of overall deaths related to injury for Non-Hispanic White children and youth was $56.5 \%$. For Asian/Pacific Islander children and youth, the rate was (41.7\%) and for Hispanic children and youth it was 35.7\%. The rate for African American/Black youth is unstable due to the small number of deaths.
- The unintentional injury death rate le.g. accidental poisoning, motor vehicle accident or drowning) decreased $53.7 \%$ from a rate of 4.1 per 100,000 children in 2010 to 1.9 per 100,000 children in 2019.
- Despite this decrease, unintentional injuries accounted for the highest average number (31 per year) and rate ( 4.1 per 100,000 ) of all injury deaths to children between 2017 and 2019 . followed by cancer ( 15 per year) and suicide (14 per year).

# SUBSTANTIATED CHILD ABUSE RATES CONTINUE TO DECLINE. 

## DESCRIPTION OF INDICATOR

This indicator reports the unduplicated count of children with substantiated child abuse allegations. Allegations refer to the nature of abuse or neglect that a child is experiencing (e.g., sexual or physical). A substantiated child abuse allegation is determined by the investigator based upon evidence that makes it more likely than not that child abuse or neglect occurred as defined in Penal Code (PC) 1165.6. A substantiated allegation does not include a report where the investigator later found the report to be false, inherently improbable, to involve accidental injury or to not constitute child abuse or neglect as defined in PC 1165.6.

## Why is this indicator important?

Studies indicate that victims of child abuse are more likely to use drugs and alcohol, become homeless as adults, engage in violence against others and be incarcerated. The identification of a family in which a substantiated incident of abuse or neglect has occurred is important because it provides an opportunity for intervention to assure child safety. Once a child abuse referral is substantiated by the investigating social worker, safety threats for the child(ren) are identified and a social worker works with the family to develop a safety plan.

## Findings

- In 2020, 24,510 children were the subject of one or more child abuse allegations in Orange County a decrease of $0.2 \%$ from 24,552 children in 2011. Of these, $18.2 \%(4,450)$ of children had substantiated allegations of child abuse in 2020, a decrease of $34.8 \%$ from 6,830 in 2011. Since 2015 , the proportion of child abuse petitions among substantiated allegations filed in court has increased, from a low of $21 \%(1,204)$ to $38 \%$ (1,709). ${ }^{1}$
- In 2020, substantiated allegations occurred at a rate of 6.2 per 1,000 children under 18 years old in Orange County, a 33.3\% decrease from 9.3 in 2011 and lower than California (6.6), with a $29.7 \%$ decrease from 9.4 in $2011 .{ }^{2} \operatorname{In} 2019$. there were approximately 656,000 maltreated children with substantiated allegations in the United States, a rate of 8.9 per thousand children, higher than Orange County and California. ${ }^{3}$
- Children under six made up the greatest proportion of substantiated allegations: children less than one year of age comprised $14.2 \%$ of substantiated child abuse allegations and children one to five years old made up $29.5 \%$ of substantiated allegations, totaling $43.7 \%$. Children six to 10 years old made up 26.1\%; 11 to 15 years old, $23.5 \%$; and 16 to 17 years old, 6.7\%.
- In 2020, most (44.3\%) substantiated child abuse allegations were due to general neglect ${ }^{4}$. followed by at-risk/sibling abuse (19.5\%), physical abuse ( $16.2 \%$ ), sexual abuse ( $12.7 \%$ ), emotional abuse ( $3.6 \%$ ), severe neglect ( $2.5 \%$ ), caretaker absence ( $0.8 \%$ ) and exploitation (0.3\%). ${ }^{5}$

# RATES OF PERMANENT PLACEMENTS WITHIN 12 MONTHS, REENTRY AND EXITS TO PERMANENCY LAG BEHIND NATIONAL STANDARDS. 

## DESCRIPTION OF INDICATOR

This indicator reports on three measures of permanency following the placement of a child into foster care. "Permanency within 12 months" reports the percent of children placed in homes through reunification with the family, adoption or guardianship within 12 months of removal. "Reentry Following Reunification" tracks those children who reentered foster care within 12 months of reunification with the family or guardianship. "Exits to Permanency" is a measure of children who were in foster care for 24 months or longer, who were then transitioned to a permanent home, including reunified with the family, placed with a legal guardian or adopted. ${ }^{1}$

Why is this indicator important?
The placement of children in foster care occurs when a child cannot remain safely with his or her family. ${ }^{2}$ Child abuse and neglect is a problem that crosses socioeconomic and racial/ ethnic boundaries with a profound effect on the well-being of the children. The number of children growing to maturity in foster care has gained considerable national, state and local attention. Too often these children experience many placements, which can lead to the inability to reunify with their families or attach to a new permanent family. Permanent placement of children helps prevent placement instability, which can be related to attachment disorders, poor educational outcomes, mental health and behavioral problems and negative adult outcomes.

## Findings

- In 2018/19, 34.6\% of Orange County foster children were placed in permanent homes within 12 months of entering foster care, which is higher than California at $33.1 \%$ and an increase of $5 \%$ from $2017 / 18$. The national standard is greater than or equal to $40.5 \%$.
- Of the $34.6 \%$ of children who were placed in permanent homes within 12 months of entering foster care in 2018/19, reunification was the most common type of permanency ( $33.8 \%$ ), followed by adoption ( $0.6 \%$ ) and guardianship ( $0.2 \%$ ).
- In 2017/18, the rate of reentry was $9.2 \%$, a $31.4 \%$ increase since 2008/09. California was higher in $2017 / 18$ at $11.3 \%$. The national standard is less than or equal to $8.3 \%$.
- In 2019/20, 32.9\% of children who were in foster care for two years or more were placed in a permanent home, 25\% higher than in 2010/11 ( $26.3 \%$ ). California is lower at $29.5 \%$. The national standard is greater than or equal to $30.3 \%$.

# JUVENILE ARRESTS 

## JUVENILE ARREST RATE IN ORANGE COUNTY CONTINUES TO BE SIGNIFICANTLY LOWER THAN IN CALIFORNIA.

## DESCRIPTION OF INDICATOR

This indicator tracks youth under 18 years old who have been taken into custody in a manner authorized by law. ${ }^{1}$ An arrest is the taking of a person into legal custody by a peace officer either under a valid warrant or on probable cause that the person has committed a crime (Cal. Penal Code § 834). An arrest may be for a felony, misdemeanor, status or infraction. Felonies generally include violent crimes, some property and drugrelated offenses, plus other serious offenses. Misdemeanor offenses include crimes such as assault and battery, petty theft, other drug and alcohol-related offenses and many less serious offenses. Status offenses are acts that are considered offenses only when committed by a juvenile, such as truancy or curfew violations.

## Why is this indicator important?

An arrest is usually the first formal encounter a youth has with the juvenile justice system. It is particularly important that at this onset of criminal activity, a pattern of juvenile delinquency does not continue into adulthood. More importantly, the flow of youthful offenders into the justice system should be prevented. Research shows that early intervention in children's lives can effectively reduce later crime. ${ }^{2}$ Prevention programs positively impact the general public because they stop crime from happening in the first place. ${ }^{3}$ Various cost-benefit analyses show that early prevention programs are a worthwhile investment of government resources compared with prison and other criminal justice responses. ${ }^{4}$

## Findings

- In 2019, there were 2,619 juvenile arrests in Orange County.
- Between 2010 and 2019, there was an $80.6 \%$ decrease in the total number of juvenile arrests in Orange County, dropping from 13,495 arrests to 2,619 arrests.
- Orange County's juvenile arrest rate in 2019 was 790 per 100,000 youth under 18 years old, a decrease of $79.7 \%$ from 2010, compared to California at 1,030 per 100,000 youth, a similar decrease of $76.4 \%$ from 2010.
- In Orange County, misdemeanors accounted for $45.4 \%(1,190)$ of juvenile arrests in 2019, which is down $85.5 \%$ from 2010 when misdemeanors accounted for $60.9 \%(8,229)$ of juvenile arrests.
- In contrast, felonies among youth accounted for $33.7 \%$ (884) of arrests in 2019, up $75.9 \%$ since 2010 when felonies accounted for $27.2 \%(3,674)$ of juvenile arrests.
- Status offenses accounted for $20.8 \%$ (545) of arrests among youth ages 18 years and younger in 2019, an increase of $65.8 \%$ in 10 years when status offenses accounted for $11.7 \%(1,592)$ of juvenile arrests in 2010.
- Among 18 to 20 year olds, the number of DUI convictions in 2020 (600) have decreased by 48.7\% from the 10-year high of 1,170 in 2011. Among youth under 18 years, there was a $72 \%$ decrease from the 10-year high in 2012 ( 87 convictions decreasing to 39 in 2020).

# JUVENILE SUSTAINED PETITIONS 

## YOUTH AGES 15-17 CONTINUE TO MAKE UP THE MAJORITY OF SUSTAINED PETITIONS.

## DESCRIPTION OF INDICATOR

This indicator reports the number and percent of juvenile petitions that are sustained. After a juvenile arrest, a referral is typically made by the arresting officer to the Probation Department for further processing. The probation officer decides whether a referral is dismissed, the juvenile is placed on informal probation or a petition will be sought for a formal court hearing. When a petition is sustained by the court, the juvenile becomes a ward of the court. A ward is either allowed to go home under the supervision of a probation officer or ordered for detention in a juvenile institution.

## Why is this indicator important?

Sustained juvenile petitions are similar to an adult criminal conviction. They indicate where and what types of crimes are occurring among youth. Many agencies have a role to play in helping to meet California's goal of rehabilitation for youth who have a sustained petition, including schools, social services agencies and community-based organizations. Knowledge about sustained juvenile petitions can help provide strategic direction to prevention, early intervention and rehabilitation efforts in Orange County

## Findings

- In 2019, there were 1,670 total juvenile petitions filed for youth 10 to 17 years old at referral. Of these, 1,029 were sustained ( $61.6 \%$ ).
- The rate of sustained petitions was 310 per 100,000 youth ages 10 to 17 years old in 2019 . a $67.2 \%$ decrease from 2010 ( 946 per 100,000 youth).
- Sustained petitions were highest among youth 15 to 17 years old at referral who received $86.6 \%$ of sustained petition decisions, followed by youth 13 to 14 years old at referral ( $13.0 \%$ ). Youth 12 and under received $0.4 \%$ of the sustained petition decisions in 2019.
- When assessed by race and ethnicity, Hispanic youth (79.0\%) had the most sustained petitions, followed by White (10.8\%), Black (5.7\%), Other/ Unknown (2.5\%) and Asian/Pacific Islander (1.9\%) youth in 2019.
- Across genders, the vast majority of sustained petitions were on juvenile males (80.4\%), with juvenile females accounting for 19.6\% of sustained petitions in 2019.

# GANG ACTIVITY AMONG YOUTH 

# NUMBER OF GANG-RELATED PROSECUTIONS SIGNIFICANTLY LOWER THAN 10 YEARS AGO. 

#### Abstract

DESCRIPTION OF INDICATOR This indicator reports the number and rate of gang-related prosecutions of juveniles under the age of 18.1 Gang-related prosecutions involve charges related to active gang membership or committing a crime at the direction of a criminal street gang, with other gang members and/or for the benefit of a gang. ${ }^{2}$

## Why is this indicator important?

Data consistently shows that gang members are responsible for a disproportionately high number of crimes committed by youthful offenders. Compared to other delinquent youth, gang members are more extensively involved in serious and violent criminal behavior. Juvenile gang members commit serious and violent offenses at a rate several times higher than non-gang adolescents. Gang crime often involves offenses such as weapons possession, drug trafficking, carjacking, assault and murder. ${ }^{3}$ According to the 2015 National Gang Report, neighborhood street gangs continue to be a significant threat to local jurisdictions across the country. ${ }^{4}$ From a societal standpoint, the issue of juvenile gangs is one that requires swift action for both the well-being and safety of communities and the youth who get caught up in gang life. The Orange County District Attorney's office seeks to reduce juvenile gang crime both by prosecuting those crimes and collaborating with other agencies to prevent juveniles from joining gangs via the Orange County Gang Reduction and Intervention Partnership (OC GRIP). OC GRIP focuses its work on reducing truancy and providing gang prevention and resiliency building curricula.

## Findings ${ }^{5}$

- In 2020, 6.6\% of juvenile prosecutions were gang-related, down 49.6\% from 13.1\% in 2011 but up from 2019 (4.7\%).
- Between 2011 and 2020, the total number of juvenile gang-related prosecutions in Orange County decreased 83.5\%, from 708 in 2011 to 117 in 2020.
- The rate of juvenile gang-related prosecutions declined $66.6 \%$ from 95.0 per 100,000 youth aged 10 to 17 in 2011 to 31.7 per 100,000 in 2020.
- The number of unique juveniles prosecuted for gang-related offenses in Orange County dropped 75.2\% from 412 in 2011 to 102 in 2020.
- Older teens accounted for the majority of gang-related activity in 2020, with teens ages $15-17$ comprising $86.3 \%$ of the total number of juveniles who were prosecuted for gang-related offenses.
- In 2020, Hispanic youth represented the highest percentage of juvenile gang-related prosecutions (85.3\%), followed by Other/ Unspecified (8.8\%), White (4.9\%) and Black (1\%) youth.

Percent of Preterm Births, by Mother's Age, 2010 to 2019 ..... 89
Percent Preterm (17-36 Completed Weeks of Gestation), 2010 to 2019 ..... 89
Percent Preterm, by Maternal Race/Ethnicity, 2010 to 2019 ..... 89
Percent Preterm for Orange County, California and United States, 2010 to 2019 ..... 90
Percent Late and Very Late Preterm for All Births and Singleton Births, Orange County, 2010 to 2019 ..... 90
Indicator: TERM BIRTHS ..... 91
Total Number and Percent of Term Infant Births, by Race/Ethnicity, 2019 ..... 91
Total Number and Percent of Total Term Infant Births, by Mother's Age, 2019 ..... 91
Total Number and Percent of Term Infant Births, by Birth Type, 2019 ..... 92
Total Number and Percent of Term Infant Births, by Delivery Type, 2019 ..... 92
Secondary Indicator: SUBSTANCE-EXPOSED INFANTS. . 93
Number of Orange County Infants Taken into
Protective Custody (or petition for dependency filed)as a Result of Testing Positive for Substance Exposureat Birth, 2010/11 to 2019/2093
Indicator: INFANT MORTALITY RATE ..... 94
Percent of Infant Deaths, by Cause, 2010 to 2019 ..... 94
Number and Rate per 1,000 Live Births Suffering Infant Mortality, by Race/Ethnicity, 2010 to 2019 ..... 95
Three Year Average Rate per 1,000 Live Births Suffering Infant Mortality, by Race/Ethnicity, 2011 to 2019 . . . . . 95
ndicator: BREASTFEEDING ..... 96
Hospital Discharge Breastfeeding Percentages in Orange County and California, 2012 to 2018. ..... 96
Orange County Number and Percent of Any and
Exclusive Breastfeeding, by Race/Ethnicity, 2012 to 2018. ..... 96
Breastfeeding Percentages in Orange County Hospitals and California, 2012 to 2017 . . . . . . . . . . . . . . . . . . . . . 97
Indicator: IMMUNIZATIONS ..... 98
Percent of Adequately Immunized Children Enrollingin School Between 2011 through 2020 in OrangeCounty and California98
Secondary Indicator: DEVELOPMENTAL DISABILITIES 99
Children Receiving Services for DevelopmentalDisabilities, 2011 to 202099

Total Number of Children Under 18 Years of Age Receiving Services for Developmental Disabilities, by Race/Ethnicity, 2011 to 2020100

Total Number of Children by Age Groups and Number and Percent of Children with a Diagnosis of Autism, Served by the Regional Center of Orange County (RCOC), July 2015 to July 2021100
Indicator: PHYSICAL ACTIVITY AND NUTRITION ..... 101

Percent of 5th, 7th and 9th Grade Students in Healthy Fitness Zone (HFZ) for Aerobic Capacity, 2012/13 to 2018/19. . 101
Percent of Students in Healthy Fitness Zone for
Aerobic Capacity, by Grade and Race/Ethnicity, 2012/13 to 2018/19.101
Percent of 5 th Grade Students Classified as Needs Improvement Based on Health Risk for Aerobic Capacity, by Race/Ethnicity, 2012/13 to 2018/19 ..... 102
Indicator: OBESITY ..... 102
Percent of 5th, 7th and 9th Grade Students in HealthyFitness Zone (HFZ) for Body Composition, 2012/13 to2018/19.102
Percent of Students Meeting Healthy Fitness Zone (HFZ) Standards for Body Composition, by Grade and Race/Ethnicity, 2012/13 to 2018/19 ..... 103
Percent of 5th Grade Students Classified as Needs
Improvement Based on Health Risk for Body
Composition, by Race/ Ethnicity, 2012/13 to 2018/19 ..... 104
Indicator: TEEN BIRTHS ..... 105
Birth Rate per 1,000 Females Aged 15-19 Years in
Orange County, California and United States, 2010 to 2019 ..... 105
Percent of Teen Births (19 and Under) of Total Births in Orange County, 2010 to 2019 ..... 105
Number and Birth Rates, by Age of Mother (19 Years and Under) per 1,000 Females, 2010 to 2019 ..... 105
Birth Rate per 1,000 Female Teen Population 15-19 Years of Age, by Race/Ethnicity, 2010 to 2019. ..... 105
Percent of Population, Total Births and Births to Teens (19 and Under), by Race/Ethnicity, 2010 to 2019 ..... 106
Number of Teen Births and Teen Birth Rates per 1,000 females 15-19 years of age, by Age and Race/Ethnicity, 2010 to 2019 ..... 107
Number of Live Births, by Mothers Age 15 to 19 and Birth Rate per 1,000 Females, by City of Residence, 2015 to 2019 ..... 108
DISEASES. ..... 109
Number and STD Case Rates Per 100,000 Youth 10-17 Years Old, by Type of Disease, 2011 to 2020 ..... 109
Number of STD's Among Youth 10-17 Years of Age, by Gender and Type of Disease, 2011 to 2020. ..... 110
Number and STD Case Rates per 100,000 Youth, By Age Group and Type of Disease, 2011 to 2020. ..... 111
Indicator: BEHAVIORAL HEALTH ..... 112
Number of Children and Young Adults through Age25 Served by Children and Youth Behavioral Health,2010/11 to 2019/20112
Number of Clients Served by Children and Youth Behavioral Health, by Race/Ethnicity, 2010/11 to 2019/20 ..... 112
Number of Services, by type of Outpatient Program 2010/11 to 2019/20 ..... 112
Number of Bed Days, by Type of Inpatient Placements, 2010/11 to 2019/20 ..... 112
Rate of Orange County Hospitalizations for MentalIllness and Substance Abuse per 10,000 Children,by City of Residence, 2013-2019113
Mental Health Hospitalization Rates per 10,000
Children, by Diagnosis and Race/Ethnicity, 2013-2019 ..... 114
Percent of Students who Reported ExperiencingDepression-Related Feelings, by Grade Level, OrangeCounty and California, 2011-2013 to 2017-2019.114
Percent of Students who Reported ExperiencingDepression-Related Feelings, by Race/Ethnicity,Orange County and California, 2011-2013 to 2017-2020 .115

Percent of Students who Reported Experiencing Depression-Related Feelings, by Gender and Grade Level, Orange County and California, 2011-2013 to 2017-2019115

Percent of Students who Seriously Considered Attempting Suicide in the Previous Year, by Grade Level, Orange County and California, 2011-2013 to 2017-2019
Percent of Students who Seriously Considered
Attempting Suicide in the Previous Year, by Race/
Ethnicity, Orange County and California, 2011-2013 to 2017-2019116
Secondary Indicator: SUBSTANCE USE SERVICES ..... 116
Number of Children and Young Adults through Age25 Served by Children and Youth Behavioral Health,2010/11 to 2019/20117
Substance Use Services: Number and Percent, by Discharge Status, 2010/11 to 2019/20 ..... 118
Number and Percent of Adolescents Receiving
Substance Use Services, by Drug of Choice and Age,2010/11 to 2019/20119
Number and Percent of Adolescents Receiving Substance Use Treatment, by Race/Ethnicity and Gender, 2010/11 to 2019/20 ..... 120
Number and Percent of Referrals to Substance Use Treatment, by Source, 2010/11 to 2019/20 ..... 121
Secondary Indicator: CHILDHOOD LEAD POISONING 122Number of Individual Children Ages 0-20 Years withElevated Blood Lead Levels ( $4.5 \mathrm{mcg} / \mathrm{dL}$ or higher),2010 to 2019122
Economic Well-Being Indicators ..... 123
Indicator: CHILD POVERTY ..... 124
Percent of Children Under 18 Years Old, Living in
Poverty, and Families Living in Poverty, Orange County and California, 2010 to 2019 ..... 124
Number and Percent of Students Eligible to Receive
Free and Reduced-Price Lunch, by District, 2020/21 ..... 125
Indicator: CALIFORNIA WORK OPPORTUNITY \& RESPONSIBILITY TO KIDS (CALWORKS) ..... 125
Number of Children Receiving Financial Assistance Countywide, 2010/11 to 2019/20. ..... 125
CalWORKs Recipients: Children by Age and City, January 2021 ..... 126
Indicator: HOMELESS STUDENTS ..... 128
Homeless Children and Youth, by School District, 2009/10 to 2018/19 ..... 128
Primary Nighttime Residency of Homeless Students, 2009/10 to 2018/19 ..... 129
Homeless High School Students 9th to 12th Grade, 2017/18 ..... 129
Indicator: SUPPLEMENTAL NUTRITION PROGRAMS ..... 130
Number of Participants Served by the WIC Program, 2009/10 to 2018/19 ..... 130
CalFresh Recipients, 2010/11 to 2019/20 ..... 130
CalFresh Recipients, by Age and City, January 2021 ..... 131
Indicator: CHILD SUPPORT ..... 132
Number of Child Support Cases, Net and Per Case Collection, 2011/12 to 2020/21 ..... 132
Child Support Collections, 2011/12 to 2020/21 ..... 132
Child Support Collections Percent of Current Support Distributed (CSD), 2011/12 to 2020/21 ..... 133
Secondary Indicator: COST OF EARLY CARE
AND EDUCATION ..... 133County-Wide Average Weekly Licensed FamilyChild Care Homes and Child Care Centers Costs,2011/12 to 2020/21133
County-Wide Average Weekly Orange County Family Child Care Homes and Child Care Centers Costs,by Region, 2020/21134
Child Care Supply, by Age of Child and Type of Child Care, 2021 ..... 134
County-Wide Quality Start Child Care Ratings, Orange County, 2014/15-2019/20 ..... 135
Secondary Indicator: SPECIAL EDUCATION ..... 159
Number of K-12 Students Receiving Special Education
Services, by Type of Disability, Orange County and California, 2009 to 2018 ..... 159
Number of Students Receiving Special Education
Services, by Age and Type of Disability, 2008 to 2018 ..... 160
Safe Homes and Communities Indicators ..... 162
Secondary Indicator: CHILD MORTALITY ..... 163
Overall Death Rate Per 100,000 Children and Youth 1 to 19 Years of Age, 2010 to 2019 ..... 163
Indicator: PREVENTABLE CHILD AND
YOUTH DEATH ..... 163
Number of Deaths and Rate Per 100,000 Population for Persons 0 to 19 Years of Age from Unintentional Injury Homicide and Suicide, 2010 to 2019 ..... 163
Death Rate per 100,000 Population for Persons Age 0-19 Years from Unintentional Injury, Homicide and ..... 164Suicide, by Age Group and Gender, 2010 to 2019.
Death Rate Per 100,000 Persons 0-19 Years of Age, by Race/Ethnicity and Cause, 2010 to 2019 ..... 165
Number and Rate per 100,000 Persons of Unintentional Injury Deaths, by Age Group, 2010 to 2019 . . . . . 166
Number and Rate per 100,000 Persons 0 to 19 Years ofAge for Unintentional Injury Deaths, by Gender, 2010 to 2019 . . 166
Number and Rate per 100,000 Persons 0 to 19 Years ofAge for Unintentional Injury Deaths, by Cause, 2010 to 2019 . . 167
Number and Rate per 100,000 Persons 0 to 19 Years ofAge for Unintentional Injury Deaths, by Race/Ethnicity,2010 to 2019 .167
Secondary Indicator: HOMICIDE DEATHS ..... 168
Number and Rate per 100,000 Persons of Homicide Deaths, by Age Group, 2010 to 2019 ..... 168
Number and Rate per 100,000 Persons 0 to 19 Years of Age for Homicide Deaths, by Gender, 2010 to 2019 ..... 168
Number and Rate per 100,000 Persons 0 to 19 Years of Age for Homicide Deaths, by Race/Ethnicity, 2010 to 2019 . ..... 69
Percent of Homicides of Total Deaths from Unintentional Injury, Homicide and Suicide for Persons 0 to 19 Years of Age, 2010 to 2019 ..... 169
Homicides Death Rate Per 100,000 Persons 0 to 19 Years of Age in Orange County and California, 2010 to 2019. . . 169
Secondary Indicator: SUICIDE DEATHS ..... 170
Number and Rate per 100,000 Persons of Suicide Deaths, by Age Group, 2010 to 2019 ..... 170
Number and Rate per 100,000 Persons 0 to 19 Years of Age for Suicide Deaths, by Gender, 2010 to 2019 ..... 170
Number and Rate per 100,000 Persons 0 to 19 Years of Age for Suicide Deaths, by Race/ Ethnicity, 2010 to 2019 ..... 171
Indicator: Child and Youth Deaths ..... 171
Total Number and Rate per 100,000 Population of Leading Causes of Death, by Age Group, 2010 to 2019 ..... 171
Secondary Indicator: CHILD AND YOUTH DEATHS ..... 177
Manner of Death, Children Less than 18 Years of Age, 2020 . . 177
Secondary Indicator: MOTOR VEHICLE ACCIDENTS ..... 178Number of Victims 0 to 19 Years of Age Killed orInjured as a Result of Motor Vehicle Accidents,by Age Group, 2010 to 2019178
Secondary Indicator: CHILDREN AND GUNS ..... 179
Number of Gun-Related Incidents with Children 0 to 19 Years of Age, by Type of Incident, 2010 to 2019 ..... 179
Counts of Children with One or More Reports, by Age and Disposition, 2020 ..... 179
Substantiated Child Abuse Allegations, by Percent for Children Under 18 Years, by Type of Abuse, 2011 to 2020 ..... 180
Total Number of Children with One or More Child Abuse Allegations and Substantiated Allegations, 2011 to 2020. ..... 180
Secondary Indicator: CHILD ABUSE - DEPENDENCY PETITIONS ..... 181
Number and Percent of Dependency Petitions Filed,2010/11 to 2019/20181
Percent of "Recurrence of Maltreatment" in 12- month
Time Period for children with a Substantiated ChildAbuse Allegation Orange County and California,2009/10 to 2018/19182
Secondary Indicator: DEPENDENTS OF THE COURT ..... 182
Monthly Number of Dependents of the Court by End of Month Cases, 2010/11 to 2019/20 ..... 182
Percent of Children in Out-of-Home Care by Race/Ethnicity, April 2012 to April 2021 ..... 183
Wraparound Referrals, by Agency, 2010/11 to 2019/20 ..... 183
Average Monthly Number of Children in Out-of-Home Care, 2010/11 to 2019/20 ..... 183
Secondary Indicator: FOSTER CARE ..... 184
Number and Percent of Placement Type, April 2012 to April 2021 ..... 184
Children and Family Services - Out-Of-Home
Placements by Age and City of Placement, April 2021 ..... 185
Number of Placement Moves: Number of Placement Moves Per Day for Children in Foster Care in a 12 Month Period, 2010/11 to 2019/20 ..... 187
Indicator: CHILD WELFARE ..... 188
Percent of Children Reaching Reunification andGuardianship within 12 Months and Reentry FollowingReunification and Guardianship, Orange County andCalifornia, 2009/10 to 2018/19188
Secondary Indicator: EMANCIPATION SERVICES ..... 189
Youth Who Received Independent Living Program Services, 2000/01 to 2007/08 ..... 189
Youth Who Received Independent Living Services, 2011/12 to 2019/20 ..... 190
Indicator: JUVENILE ARRESTS ..... 191
Orange County Juvenile Arrests 10 to 17 Years Old, 2009 to 2018 ..... 191
Juvenile Arrests by City, Youth 10 to 17 Years Old, 2009 to 2018 ..... 192
Number of Juvenile Arrests and Rates Per 100,000 Youth Ages 10 to 17, Orange County and California,2010 to 2019193
Secondary Indicator: REFERRALS TO PROBATION ..... 194
Total Probation Referrals with Final Case Disposition, 2010 to 2019 ..... 194
Total Number and Percent of Juvenile Probation Referrals by Age, 2010 to 2019. ..... 194
Probation Referrals, by City of Residence, 2010 to 2019 ..... 195
Total Number and Percent of Probation Referrals, by Final Case Disposition, 2010 to 2019 ..... 196
Total Number and Percent of Probation Referrals, by Race and Ethnicity, 2010 to 2019 ..... 197
Total Number and Rate per 100,000 of Probation Referrals Incarcerated in County Institutions and the Division of Juvenile Justice California Department of Corrections \& Rehabilitation, 2010 to 2019 ..... 197
Indicator: JUVENILE SUSTAINED PETITIONS ..... 198
Juvenile Sustained Petitions by City Referred Youth 10-17 Years Old, 2019 ..... 198
Juvenile Sustained Petitions Youth 10 to 17 Years Old, by Sex, 2019 ..... 199
Juvenile Sustained Petitions Youth 10 to 17 Years Old, by Age, 2019 ..... 199
Juvenile Sustained Petitions Youth 10 to 17 Years Old, by Race and Ethnicity, 2019 ..... 199
Indicator: GANG ACTIVITY AMONG YOUTH ..... 200
Gang Related Prosecutions by Crime Type, 2011 to 2020 ..... 200
Number of Gang Related Prosecutions, Total and byUnique Individuals, and Percent by Repeat Offenders,2011 to 2020200
Number and Percent of Gang Related Prosecutions by Age, 2011 to 2020 ..... 201
ang Related Prosecutions by Race/Ethnicity, 2011 to 2020 ..... 201

## Supplemental Tables: Good Health

## Secondary Indicator: SUBSTANCE-EXPOSED INFANTS

## Definition

Substance-exposed infants refers to the number of infants with positive toxicology results for alcohol and/or illicit drugs at the time of birth that were provided Emergency Response services by the County of Orange Social Services Agency (SSA), resulting in juvenile court intervention. Any indication of maternal substance use requires an assessment of the needs of the mother and child by a health practitioner or medical social worker prior to the child leaving the hospital. There is a mandatory assessment form that serves as a guide for medical staff to focus their assessment, and the decision to report a child to the SSA Child Abuse Registry is to be based on a reasonable suspicion that the parent may be unable to care for the child. This must be based on at least one factor other than the positive toxicology screen.

Number of Orange County Infants Taken into Protective Custody (or petition for dependency filed) as a Result of Testing Positive for Substance Exposure at Birth, 2010/11 to 2019/20

## Supplemental Tables: Good Health

## Indicator: BREASTFEEDING

## Definition

Local statistics on breastfeeding are obtained from two California Department of Public Health data sources. The InHospital Newborn Screening Program documents feeding practices at discharge for all Orange County births. The Maternal Infant Health Assessment (MIHA) is an annual statewide-representative survey of women with a recent live birth in California. In-Hospital Newborn Screening data are presented as the percentage of mothers breastfeeding (any or exclusive breastfeeding) in the hospital after birth. MIHA data are presented as the percentage of mothers who reported breastfeeding (any or exclusive breastfeeding) at one month after delivery and at three months after delivery. An infant is exclusively breastfed when fed only with human milk and no other supplements such as water, formula, non-human milk, food or juice. Any breastfeeding is defined as feeding with both human milk and infant formula.

## Supplemental Tables: Good Health

## Indicator: IMMUNIZATIONS

## Definition

This indicator reports the percentage of children who received all doses of specific vaccines required for children attending child care facilities and required at kindergarten entry.

Percent of Adequately Immunized Children Enrolling in School Between 2011 through 2020 in Orange County and California

| Assessment Year | Up-To-Date at Kindergarten Entry* |  | Up-to-Date for Child Care** |  |
| :---: | :---: | :---: | :---: | :---: |
|  | CA (\%) | OC (\%) | CA (\%) | OC (\%) |
| 2011 | 91.0 | 89.5 | 91.0 | 89.5 |

| 2018 | 94.8 | 95.7 | 95.9 | 95.9 |
| 2019 | N/A | 95.5 | N/A | 96.1 |
| 2020 | N/A | 94.7 | N/A | 95.4 |

* Up-to-date (UTD) for Kindergarten: Proof of immunizations is required to enter kindergarten. Children who are partially immunized are not considered UTD but may attend school as long as they are not overdue for doses needed to complete the vaccine series. Children with a written exemption based on personal beliefs or documented medical conditions are also not UTD but may attend school. Kindergarten Assessment Results, California Department of Health Services, Immunization Branch. Sources: Kindergarten Assessment Results, California Department of Health Services, Immunization Branch
**Up-to-date (UTD) for Child Care: Proportion of children attending child care facilities reported to have received all required vaccines. Children with a written exemption based on personal beliefs or documented medical conditions are also not UTD but may attend school. 2009-2018 Child Care Immunization Assessment Results, California Department of Health Services, Immunization Branch. Sources: Child Care Immunization Assessment Results, California Department of Health Services, Immunization Branch

## Supplemental Tables: Good Health

## Secondary Indicator: DEVELOPMENTAL DISABILITIES

## Definition

This indicator tracks the total number of children under 18 years of age who utilized services at the Regional Center of Orange County (RCOC). This includes children over three years of age who have a diagnosed developmental disability, and children under three years of age who are eligible for Early Intervention Services under Part C of the Individual with Disabilities Education Improvement Act (IDEIA) through California's Early Start Program. The Early Start Program provides healthcare, intervention specialists, therapists and parent resources for infants, toddlers and their families.

## Secondary Indicator: SUBSTANCE USE SERVICES

## Definition

This indicator tracks the number and percent of adolescents receiving substance use services provided by the Orange County Health Care Agency's (HCA) Behavioral Health Services. This indicator reflects the trend of adolescent utilization of services provided by ADAS and its contract providers rather than the absolute number of adolescents needing services or using alcohol or other drugs in Orange County.

## Secondary Indicator: COST OF EARLY CARE AND EDUCATION

## Definition

"Early care and education" refers to preschool and childcare programs that provide care and education for young children (typically ages 0 to 12). This indicator tracks the average cost of early care and education per week in Family Child Care Homes (FCCH) and Child Care Centers for infants, preschool and school-aged children. Both the state and federal government for low-income families support subsidized early education programs. The California Department of Education (CDE) funds agencies to provide quality childcare and development services to low-income families in licensed childcare centers, licensed family childcare homes and license-exempt settings. Head Start is a federally-funded program that provides comprehensive educational, health and social services to low-income children ages prenatal to five years and their families.

## Secondary Indicator: ENGLISH LEARNERS

## Definition

According to California Education Code 306(a), an English Learner (EL) is "a child who does not speak English or whose native language is not English and who is not currently able to perform ordinary classroom work in English." The process of identifying an English Learner begins with the home language survey, but this survey alone does not qualify a student as an EL. Districts administer the California English Language Development Test (CELDT) to students whose home language is other than English within 30 calendar days of initial enrollment. The CELDT assesses English comprehension, speaking, listening, reading and writing, and it determines whether a student is an EL. An overall CELDT score of Early Advanced or Advanced indicates a student is proficient provided no domain score (listening, speaking, reading or writing) falls below Intermediate. Students who do not achieve proficiency on the CELDT are considered ELs and are assessed annually until reclassified. Reclassified Fluent English Proficient (R-FEP) students are former ELs who have met multiple criteria to succeed in an English-only classroom. These reclassified students are monitored for two years to ensure their success.

## Supplemental Tables: Educational Achievement

## Secondary Indicator: HIGH SCHOOL GRADUATION

## Definition

The California Education Code establishes a minimum set of requirements for graduation from California high schools. These include a total of 13 required courses and passage of the California High School Exit Exam (CAHSEE). Local school boards can include additional requirements that they consider important for their local school district. Graduation rates are collected annually and included in the Annual Yearly Progress (AYP) accountability system. The data shows the percentage of students entering Orange County high schools that could potentially graduate during the four-year time period (2008 to 2012). Data includes students who completed high school with a standard high school diploma or special education waiver or exemption, an adult education high school diploma or the California High School Proficiency Exam.

## Supplemental Tables: Educational Achievement

## Secondary Indicator: SPECIAL EDUCATION

## Definition

Special education refers to specially designed instruction and related services at no cost to the parent that meets the unique needs of individuals whose educational needs cannot be met with modification of the regular instruction program. Special education is an integral part of the total public education system and provides education in a manner that promotes maximum interaction between children or youth with disabilities and children or youth who are not disabled in a manner that is appropriate to the needs of both. Special education provides a full continuum of program options including instruction conducted in the classroom in the home in hospitals and institutions and in other settings; and instruction in physical education to meet the educational and service needs of individuals with exceptional needs in the least restrictive environment.

Secondary Indicator: DEPENDENTS OF THE COURT

## Definition

Dependents of the court are children who have been found by Juvenile Court action to require protection and supervision by the Juvenile Court from abuse and/or neglect. These children can be either in their own homes under Social Services Agency (SSA) supervision or in out-of-home care such as in the care of a relative nonrelated extended family member (NREFM) foster parent or group home.

## Supplemental Tables: Safe Home and Communities

## Secondary Indicator: FOSTER CARE

## Definition

When the Juvenile Court determines that a child cannot safely remain with his or her own family the Social Services Agency (SSA) identifies a placement for the child. Relative/guardian care is the primary placement considered in order to comply with state law and best practice of placing children in the least restrictive most family-like setting. If relatives are not available the next best option is a non-related extended family member (NREFM). If relatives and NREFMs are not available SSA may place the child in a county licensed foster family home (FFH) or a home provided by a Foster Family Agency (FFA). FFA-certified homes are provided by non-profit agencies licensed by the state to develop and supervise specialized foster homes for the placement of children who require a higher level of care due to emotional or behavioral problems. A child with even more significant behavioral issues may be temporarily placed in a state licensed group home or other residential setting to meet their treatment needs.

Number and Percent of Placement Type, April 2012 to April 2021

## Secondary Indicator: EMANCIPATION SERVICES

## Definition

Social Services Agency's (SSA) Transitional Planning Services (TPS) is a broad-based Independent Living Program (ILP) designed to prepare foster youth for self-sufficiency. SSA submits an annual statistical report to the state describing ILP activities. Select youth characteristics and program outcome information are presented from the report to describe emancipation services offered received and/or provided. Services may be provided to youth as young as 14 and as old as 24. These youths include those who were in the custody of SSA due to parental abuse and neglect former probation wards who were involved in the juvenile justice system and children with mental health needs placed in foster care by the Health Care Agency. TPS also serves youth who were in foster care in other counties and have relocated to Orange County. TPS is the responsibility of the SSA Children and Family Services and involves many community partners committed to assisting youth and young adults in a wide array of Independent Living Program support services including but not limited: to basic life skills training employment career and vocational assessments and placements educational resources and funding and medical and mental health services.

Youth Who Received Independent Living Program Services, 2000/01 to 2007/08

| Characteristics of Youth Served | 2000/01 | 2001/02 | 2002/03 | 2003/04 | 2004/05 | 2005/06 | 2006/07 | 2007/08 |

## Supplemental Tables: Safe Home and Communities

## Secondary Indicator: REFERRALS TO PROBATION

## Definition

Referrals to the Orange County Probation Department pertain to individuals who received a final disposition. In contrast to juvenile arrests which includes ages 10-17 with 18-year-olds handled by the juvenile court as adult, arrests referrals include ages up to 24 years. Almost all of these referrals involve a criminal offense because arrests for status offenses are generally handled by the arresting agency. Disposition actions on referrals can include diversion informal supervision under the Welfare Institution Code 654 deferred entry of judgment or consideration by the juvenile court for wardship or dismissal. This indicator counts only one disposition per minor per day.

[^1]:    Effective July 1, 2016, California law now removes the personal belief exemption from statute and requires almost all schoolchildren to be fully vaccinated in order to attend public or private elementary, middle and high schools. For kindergarten entrance, children must be immunized against 10 diseases: Diphtheria, Haemophilus Influenza Type B (Bacterial meningitis), Measles, Mumps, Pertussis (whooping cough), Polio, Rubella, Tetanus, Hepatitis B and Varicella (chicken pox). Home school students or students who do not receive classroom-based instruction are not required to be vaccinated. Students who qualify for an Individualized Educational Program cannot be prevented from accessing any special education and related services required by their IEP. The medical exemption will remain in statute.

[^2]:    California Physical Fitness Test uses the Cooper Institute's FITNESSGRAM approach, which classifies 5th grade students at "Health Risk" due to body composition when they had a body fat percentage or a body mass index (BMI) that could result in health issues. "Health Risk" classifications for body composition are defined using criterion-referenced, age-specific standards. As of 2013/14, "at health risk due to body composition" is equivalent to or greater than the 95th percentile of BMI which is obesity. The definitions of FITNESSGRAM categories were modified to more closely approximate widely accepted CDC-defined BMI weight classification schemes and improve classification agreement between body fat and BMI based approaches. Because of these adjustments, California Physical Fitness Test data collected prior to the 2013/14 school year are not comparable to those collected under the current standards.

A cohort is a defined group of students that could potentially graduate during a 4 -year time period lgrade 9 through grade 12). Due to the changes in the methodology for calculating the 2016-17 Adjusted Cohort Graduation Rate (ACGR) and subsequent years, the 2016-17 ACGR data is not comparable with the cohort outcome data from prior years. ${ }^{2}$ Belfield, C. and Levin, H. (2007). The Economic Losses from High School Dropouts in California. ${ }^{3}$ National Center of Education Statistics, Status Dropout Rates (Updated May 2021). ${ }^{4}$ Socioeconomically Disadvantaged is a student whose parents have not received a high school diploma or is eligible for the free or reduced-price lunch program. English Learner is a student identified as English learner based on the results of the California English Language Development Test or is a reclassified fluent-English-proficient student (RFEP) who has not scored at the proficient level on the California English-Language Arts and Mathematics Standards Tests. Student with Disabilities is a student who receives special education services and has a valid disability code or was previously identified as special education but who is no longer receiving special education services for two years after exiting special education. Migrant is a student who changes schools during the year, often crossing school district and state lines, to follow work in agriculture, fishing, dairies or the logging industry. Homeless Youth is a student who lacks a fixed, regular and adequate nighttime residence.
